The Introduction of ATCOM

Founded in 1998, ATCOM technology has been always endeavoring in the R&D and manufacturing of the internet communication terminals. The product line of ATCOM includes IP Phone, USB Phone, IP PBX, VoIP gateway and Asterisk Card.

Chapter 1 the Introduction of IP04

Overview of the IP04

The IP04 is a complete Asterisk Appliance with four single port FXO or FXS modules. It is an embedded open source Linux system with built-in SIP/IAX2 proxy server and NAT features. It provides a solid, uniform platform for traditional PSTN communications as well as VoIP communications.

Targeting for SOHO user and SMB market with an easy to use graphical interface, IP04 provides a cost-saving solution on their telecommunication/data needs. With IP04, company with branch offices in different countries can be easily combined together to work like a virtual single office through Internet.

Features

Open Source Asterisk IP PBX High performance OSLEC (Open Source Line Echo Canceller) Configurable IVR menu Voice Mail, Voicemail to Email Call forward, Call waiting, Call transfer Call conference Call queues, Ring group SIP trunk, IAX trunk, PSTN analog trunk Call Detail Record Access via: SSH/telnet/web Firmware upgradable via web page 50+ available SIP/IAX2 extensions 20 concurrent calls

Applications

SOHO/SMB telephony system Hosted service FAX terminal IVR system

Interface

- 1 * RJ45 port
- 1 * Power port
- 1 * MMC/SD slot
- 4 * RJ11 port (FXS/FXO interchangeable)
- 4 * Single port FXO/FXS module slot

Hardware

CPU: 400MHz Blackfin 532 Chip Four analog (FXO/FXS) module interface. NAND flash 256 MB SDRAM 64MB

System

Open Source uClinux

Measurement and Weight

Inner box	225 * 120 * 30mm
G.W./unit	0.765KG
Carton MEAS	456 * 442 * 362 mm
Units per Carton	21 units/ CTN
G.W./CTN	18 KG/CTN

Package

Item	Quantity
IP04	1
RS232 module	1
Power Adapter	1
Manual (disk)	1

For the usage of IP04 in VoIP field, you can refer to the following network topology.

Chapter 2 Access to the IP04

You need a PC to access to the IP04, there are four ways for you to access the IP04:

- 1. Web page access by browser
- 2. SSH access by putty
- 3. Access by browser with Fallback IP Address
- 4. Console port access by RS232 console cable

In order to access to IP04 by the first three ways, you have to check that if your network connection between IP04 and PC is OK. If you do not have network connection between IP04 and PC, you can try to use the last way to access to IP04 and change the IP address for IP-04.

2.1 Web Page Access by Browser

It is the most convenient and common way to access the IP04, you just need to open your browser and input the IP address of IP04 WAN port (the default IP address is 192.168.1.100). You would better use Firefox instead of IE, because there are compatible issues.

Then input the default Username: admin; Password: atcom (the password of old version is mysecret) in the presented screen like the following:

ATCOM	
[] Home	Velcome to VoIPtel CE

[] Call Queues								

When you login successfully, you can get the configuration web page as below:

2.2 SSH Access by Putty

Logging into IP04 by SSH, you can configure IP04 by Linux command.

 Please open your putty software, and input the IP04 IP address in the Host Name textbox, input port number in the Port textbox, click the SSH Connection type, then click open button. Please refer to the following screen:

😵 PuIIY Configurat	ion 🔀
Category:

About	<u>O</u> pen <u>C</u> ancel

2) Please input username: root, and the default password: 12xerXes16 in the following screen, you can access to IP04 successfully.

₽ 192.168.1.100 - PuTTY	
login as: root root@192.168.1.100's password:	10
10018192.100.1.100 S passeded.	

When you log into IP04 successfully, you can get the following illustration:

2.3 Access by Browser with Fallback IP Address

This way only be supported by the latest version (voiptel_ce_ip04-0.3.6) of IP04. If you forget the IP Address of IP04 you have set up, you can use the fallback IP Address: 172.31.255.254/30. Before logging into IP04, please set up the IP Address of your PC: 172.31.255.253 and SubMask: 255.255.255.252. At last, you can open your browser and enter:172.31.255.254 to log into the web page of IP04.

2.4 Console Port Access to IP04

If you do not have network connection between IP04 and PC, you can try to access to IP04 by console port. Please try to do as the following steps:

1. Please connect the console port of IP04 to your PC's console port with RS232 console cable, you can refer to the following illustration:

 Please run your Hyper Terminal, and set up the console port like the following: Bits per second: 115200 Data bits : 8 Parity: None Stop bits: 1

Flow control: None

3. Change the IP Address by Hyper Terminal

The default IP address of IP-04 is 192.168.1.100. Your network may have a different IP address range such as 192.168.10.xx. In this situation, you can not access to IP-04 by putty and browser if you do not change the IP-04 IP address. So you have to change the IP address for IP-04 by Hyper Terminal to make it in the same network segment as your LAN.

After you have accessed to IP-04 by Hyper Terminal, please use the following command to change the IP address for IP-04.

root:~> if config eth0 192.168.1.151(the IP address you want to set for IP-04)

By this way, the IP address you set for IP-04 is temporary, it will recover to the original default IP address after rebooting. If you want to give a static and permanent IP address for IP-04, you can try to set it in web GUI, for detail steps please refer to chapter 3.

Chapter 3 Configure IP04 by Web GUI

3.1 System Status

In the system status screen, it displays the functions you configured, such as: trunks, extensions, conference and so on like the following screen:

ATCOM						? L0

3.2 Configure Hardware

In the configure hardware page, it includes the following components: analog hardware, tone region, advanced settings.

Analog Hardware

When you boot the IP04, which will detect the FXO and FXS modules automatically, the analog hardware component displays the modules which are detected correctly.

Tone Region

You should select the tone region according to your country, if it does not have your country's name in the dropdown list, please ask your service operator which kind of tone region is used in your area.

3.3 Trunks

To receive calls from PSTN and make calls to the outside world, you have to use trunk. Please select the **Trunks** option from the vertical menu on the left of the main page, then you can get the following screen:

[] System Status	Manage Analog trunks	φ		
[] Configure Hardware [] Trunks	Analog Trunks	Service Providers	VOIP Trunks	T1/E1/BRI Trunks
Trunks are outbound lines used to allow the system to	🕂 New Analog Trunk			
make calls to the real world. Trunks can be VoIP lines or			No Analo;	g Trunks Defined.
traditional telephony lines.				

3.3.1 Create Analog Trunks

Analog trunk is associated with FXO port, and it will call outside by PSTN line. Click on **New Analog Trunk** in the illustration above, the pop-up screen is where you create and set up trunk.

Edit Analog Trunk		X

	🚫 Cancel	Update			

There are many parameters for you to set up, I just set the following two parameters:

Channels: select the FXO port you want to use. Here I use the port 2.

Trunk Name: a unique label to help you identify the trunk when listed in outgoing calling rules and incoming calling rules. Here I use the trunk2 as my trunk name.

For the advanced options, you can put your cursor on the ① label, you can get the information of the parameter, customers have to set these parameters according to your service provider and your need.

3.3.2 VoIP Trunks

A VoIP service provider (VSP) that you have signed up with is also a trunk. Via the VoIP trunk you can dial via the VoIP service to reduce your cost when making international calls. You can set up the VoIP trunk to make calls to the PSTN or other VoIP network depends on the service you use. You can also use the VoIP trunk to link headquarter and branch offices for free internal calls. Click on **New SIP/IAX Trunk**, the following screen is where you create and set up VoIP trunk:

Create New SIP/IAX trunk	x
Туре:	SIP 💌
Provider Name 🛈:	siptrunk1
Hostname :	192.168.1.213
Username :	500
Fromuser :	
Fromdomain :	
Password :	500
Contact Ext.:	
Insecure Type:	very 🗸 🛈
	Cancel

The important parameters are:

Type: You can select SIP or IAX type to meet your need.

Provide Name: a unique label to help you identify the trunk when listed in outgoing calling rules and incoming calling rules.

Hostname: the IP address or domain name of your service provider's server.

Username: the username that your service provider configured.

Password: the password that your service provider configured for the user.

3.4 Outgoing Calling Rules

Outgoing calling rules is used to route an outgoing call, when you make an external call, which trunk and what dial-pattern the call used are configured in outgoing calling rules. Please select the Outgoing Calling Rules option from the vertical menu on the left of the main page, then you can get the following screen:

🖸 System Status	Nanage Calling Rules 🔍
[] Trunks [] Outgoing Calling Rules	★ New Calling Rule Restore Default Calling Rules Outgoing Calling Rules
Calling Rules define dialing permissions and routing rules.	An outgoing calling rule pairs an extension pattern with a trunk used to dial the pattern. This allows different patterns to be dialed through different trunks (e.g. 'local' 7-digit dials through a PRI but 'long distance' 10-digit dials through a low-cost SIP trunk). You can optionally set a failower trunk to use when the primary trunk fails. Note that this panel manages only individual outgoing call rules. See the Dial Plans section to associate multiple outgoing calling rules to be used for User outbound dialing.
	No CallingRules defined !!

Click on **New Calling Rule** button on the illustration above, the following screen is where you create and set up outgoing calling rule:

Edit Calling Rule X
Calling Rule Name 🛈 : outgoing1
Pattern ① : _2X.
Send to Local Destination 1
Destination :
Send this call through trunk:
Use Trunk 🛈 trunk2 💌
Strip 🛈 1 digits from front
and Prepend these digits (1) before dialing
Use FailOver Trunk 🛈 :
fail over Trunk 🛈 siptrunkl 😒
Strip 🛈 📃 digits from front
and Prepend these digits ① before dialing
Cancel ✓ Save

The important parameters I configured are below:

Calling Rule Name: a unique label to help you identify the outgoing calling rule when listed in dial plans, I use outgoing1 as the calling rule name here.

Pattern: it acts like a filter for marching numbers you dialed, here I set up _2X., it means any number you dial out with prefix 2 will use this outgoing call rule.

Use Trunk: select the trunk for outgoing calling rule, here I select the trunk2 I set up before. **Strip**: I press 1 here, it will strip the first digit of the number string you dialed.

You can get the detail information about every single parameter by putting your cursor on the \bigcirc

label.

At last, please click on **Save** button, and click on **Apply Changes** button in up right corner of the main page.

The way of outgoing calling rules works:

Every time you dial a number, asterisk will do the following in strict order:

- Examine the number you dialed.
- · Compare the number with the pattern that you have defined in your first outgoing rule and if

matches, it will initiate the call using that trunk. If it does not match, it will compare the number with the pattern that you have defined in the second outgoing rule and so on.

Pass the number to the appropriate trunk to make the call.

3.5 Dial Plans

A DialPlan is a set of Calling Rules that can be assigned to one or more users. Please select the **Dial Plans** option from the vertical menu on the left of the main page, then you can get the following screen:

[] System Status	DialPlans 🕴				
[] Trunks					
[] Outgoing Calling Rules [] Dial Plans	A Dial Plan is a collection of Outgoing Call Rules . Dial Plans are assigned to Users to specify the dialing permissions they have. For example, you might have				
A Dial Plans A DialPlan is a set of 'Calling Rules' that can be	one Dial Fian fis a tolletton to outgoing cain miles . Dial Fians de assigneu to deels do specify the unaing permissions they have rol example, you night one Dial Fian for local calling that only permits users of that Dial Plan to dial local numbers, via the 'local' outgoing calling rule. Another user may permitted to dial long distance numbers, and so would have a Dial Plan that includes both the 'local' and 'longdistance' outgoing calling rules.				
assigned to one or more					
users.	No DialPlans defined !!				

Click on **New DialPlan** button on the illustration above, the following screen is where you create and set up dial plan:

Create New DialPlan	
DialPlan Name:	DialPlan1
Include Outgoing Calling Rules:	☑ outgoing1
Include Local Contexts:	♥default ♥parkedcalls ♥conferences ♥ringgroups ♥voicemenus ♥queues ♥voicemailgroups ♥directory
	Scancel Zave

DialPlan Name: a unique label to help you identify the dial plan when listed in user component, you have to set up a dial plan name and select outgoing call rule and local context that you want to use.

3.6 Users

Users component is used to add or remove Analog, SIP, IAX extension. Please select the **Users** option from the vertical menu on the left, then you can get the following screen:

🖸 System Status	User Extensions on PBX 🕸
[] Trunks	◆Create New User Modify Selected Users X Delete Selected Users List of User Extensions
[] Outgoing Calling Rules

6			

Name: a unique label to help you identify the voice menu when listed in incoming calling rules. Add new Step: select an action from the drop-down list. I add three steps above, so it will answer

the call, and play a sound file, at last go to user 6001.

Click on **Allow KeyPress Events**: when the caller is in voice menu, they can press some specific numbers which are defined here to enter other destination. Here I define three numbers for going to operator, ringgroup, and user respectively.

At last, please click on **Save** button, and click on **Apply Changes** button in up right corner of the main page.

3.10 Time Intervals

Time Intervals defines ranges of working time that will be used by call routing features. Please select the **Time Intervals** option from the vertical menu on the left of the main page, then you can get the following screen:

[] System Status	Time Intervals 🔅		
[] Trunks	+ New Time Interval	Time Intervals	
[] Outgoing Calling Rules	when The Interval		
[] Dial Plans		Time Interval Name	Then
[]Users			
[] Ring Groups			
C Music On Hold			
[] Call Queues			
[] Voice Menus			
[] Time Intervals			
Time Intervals are defined			
ranges of time that will be used by call routing			
features.			

Click on **New Time Interval** button on the illustration above, the following screen is where you create and set up time interval:

Time Interval Name :	timeinterval1
۲	By day of week
	Mon 💙 to Fri 💙
0	By Days of a Month
	Date : Month :
Time:	Entire Day Start Time : 09:00 AM End Time : 06:30 PM
	🚫 Cancel 🗹 Update

Time Interval Name: a unique label to help you identify the time interval when listed in incoming calling rules. I set up timeinterval1 as time interval name.

By day of week: I select it from Monday to Friday, the incoming call rule only works from Monday to Friday.

Time: I set up it from 09:00 AM to 06:30 PM, the incoming call rule only works from 09:00 AM to 06:30 PM.

At last, please click on **Update** button, and click on **Apply Changes** button in up right corner of the main page.

3.11 Incoming Calling Rules

This is where the behavior of incoming calls from all trunks is being handled. When an incoming call from PSTN or VoIP trunk is received, asterisk needs to know where to direct it. It can be directed to a ring group, an extension, digital receptionist, voice menu or queue. For this purpose, Incoming Calling Rules need to be set up.

Please select the **Incoming Calling Rules** option from the vertical menu on the left of the main page, then you can get the following screen:

Click on **New Incoming Rule** button on the illustration above, the following screen is where you create and set up time interval:

New Incoming Rule	X
Trunk :	trunk2 💙
Time Interval :	timeinterval1 💌
Pattern 🛈 :	s
Destination :	VoiceMenu voicemenul 💌
	Cancel ☑ Update

Trunk: select trunk for incoming call to use. I select trunk2 I set up before.

Time Interval: determine the time when the incoming call rule works, I select timeinterval1 I set up before.

Pattern: match the destination number, I use S which will match any destination number.

Destination: I select voicemenul, so the call will be ruled to voice menu.

At last, please click on **Update** button, and click on **Apply Changes** button in up right corner of the main page.

3.12 Voicemail

When you call someone who does not answer the call, you can leave a voice message for the called party if the called party supports voice mail.

Please select the **Voicemail** option from the vertical menu on the left of the main page, then you can get the following screen:

[] System Status	General VoiceMail Settings 🕴
[] Trunks	
[] Outgoing Calling Rules	General Settings Email Settings for VoiceMails SMTP Set
[] Dial Plans	
[] Users	General VoiceMail Settings
[] Ring Groups	Extension for checking messages () 6750
[] Music On Hold	Direct Voicemail Dial ① :

Other Options Other Options Image: Strategy and the strategy	
Cancel Update	

3.13 Conferencing

The conferencing function of Asterisk is similar to a Tele-conference call where multiple callers can call in and participate in a two-way conference like in a party room where everyone can talk and listen to one another or just to listen to a Tele-presentation.

Please select the **Conferencing** option from the vertical menu on the left of the main page, then you can get the following screen:

[] System Status	Hanage Conference Rooms 🔅
[] Trunks	+ New Conference Bridge Conference Rooms
[] Outgoing Calling Rules	
[] Dial Plans	No Conference rooms defined !!
[] Users	
[] Ring Groups	
[] Music On Hold	
[] Call Queues	
[] Voice Menus	
[] Time Intervals	
[] Incoming Calling Rules	
[] Voicemail	
[] Conferencing	
MeetMe conference bridging allows quick, ad-hoc conferences with or without security.	

Click on **New Conference Bridge** button on the illustration above. Below is what my conference configuration page looks like:

	ATCOM
Edit Conference Bridge 6300	X
Extension : 6300 ()	Marked/Admin user Extension :
	- Password Options:
Pin Code: 12	3 1 Admin PinCode: 456 1
c	Conference Room Options:
Image: Play hold music for fir caller	st 🔲 🛈 Close conference when last marked user exits
🗆 🛈 Enable caller menu	Announce callers
🗆 🛈 Quiet Mode	🔲 🛈 Wait for marked user
	Cancel Vpdate

Naturally there are some options that you may wish to have for the conference room. They are entirely up to you. The main important things are for you to create the conference room number and the conference pin code for you to know how to enter into the conference. The rest of the

fields are optional. You can get information of other parameters by putting your mouse on the label.

This conference number is 6300, the Pin Code is 123 for common member, the Pin Code is 456 for Admin. So you have to dial 6300 then, press the Pin Code, if you want to enter the conference. I enable the play hold music for option and announce callers option, so the first member who enter the conference will listen to a music and the online members will be informed when someone enter the conference.

At last, please click on **Update** button, and click on **Apply Changes** button in up right corner of the main page.

3.14 Follow Me

If A calls B, B does not answer, the call will be transferred to C who is set up in follow me. Please select the **Follow Me** option from the vertical menu on the left, then you can get the following screen:

	Follow IIe 🔅			
[] Outgoing Calling Rules		FollowMe Preferences for U	sers FollowMe Options	
		'Follow Me' preferenc	es for users	
[] Ring Groups	Extension	Follow Me	Follow Order	
	6001	Disabled	Not Configured	Edit
	6002	Disabled	Not Configured	Edit
	6003	Disabled	Not Configured	Edit
	6004	Disabled	Not Configured	Edit
	6005	Disabled	Not Configured	Edit
	6006	Enabled 60	01	Edit
[] Conferencing				
[] Follow Me				

You can choose user for which you want to setup follow me function, Here taking the user 6006

for an example, click on the edit button at the same line as 6006, you can get the following screen:

X
Status 🛈 : 🔿 Enable 💿 Disable
'Music On Hold' Class 🛈 : 💌 💌
DialPlan 🛈 : DialPlan1 💌
Destinations 🛈 :
Add FollowNe Number
Save Save

Select the enable status, and click on Add FollowMe Number button to add a destination phone.

	X
Status 🛈 :	⊙ Enable ○ Disable
'Music On Hold' Class 🛈 :	
DialPlan 🛈 :	DialPlan1 💟
Destinations 🛈 :	6001 (10 seconds) 🗸 🛇 🔕
New FollowNe Number 🛈 :	⊙ Dial Local Extension ○ Dial Outside Number
Dial Order 🛈 :	for 30 Seconds 6001 6001 6002 6002 6003 6003 6004 6004 g with previous extension/number 6005 6005 6006 6006 Add

Click on **Dial Local Extension** and select 6001. Click on **Add** button and click on **Apply Changes** button in up right corner of the main page.

Through the above settings, someone calls 6006, but 6006 does not answer, the call will be transferred to 6001 automatically.

3.15 VoiceMail Groups

Define VoiceMail Groups to leave a voicemail message for a group of users by dialing an extension.

Please select the **VoiceMail Groups** option from the vertical menu on the left of the main page, then you can get the following screen:

Click on **New VoiceMail Group** button on the illustration above. Below is what my VoiceMail Group configuration page looks like:

New Voice Mail Group	X
VoiceMail Group's Extension:	6600
Label:	notice
User MailBoxes:	☑ 6005 ☑ 6006
	Cancel

From the above settings, I can dial 6600 to leave message for user 6005 and 6006.

3.16 Voice Menu Prompts

This component is used for recording custom voice menu.

Please select the **Voice Menu Prompts** option from the vertical menu on the left of the main page, then you can get the following screen:

ATCOM	
[] System Status	Custon Voice Menu Prompts 🔌
[] Trunks	List of Custom Voice Menu Prompts
C Outgoing Calling Rules	Record a new Voice Menu prompt Upload a Voice Menu prompt
[] Dial Plans	
[] Users	No custom Voice Menu prompts found //
[] Ring Groups	
[] Music On Hold	You can record a new VoiceMenu Prompt by clicking on the 'Record a new Voice Menu prompt ' or click on the 'Upload a Voice Menu prompt' button to upload a custom voice menu.
[] Call Queues	
[] Voice Menus	
[] Time Intervals	
[] Incoming Calling Rules	
[] Voicemail	
[] Conferencing	
[] Follow Me	
[] Directory	
[] Call Features	
[] VoiceMail Groups	
[] Voice Menu Prompts	
Record or Upload custom VoiceMenu prompts.	

Click on **Record a new Voice Menu prompt** button on the illustration above. Below is what my Record a new Voice Menu prompt configuration page looks like:

	File Name:	WelcomToATCOM
dial this User Extens: prompt:	ion to record a new voice	6001 💌

File Name: give a filename for the record sound file, here I give a name: WelcomToATCOM **Dial this User Extension to record a new voice**: dial to a user, then the user pick up the phone and speak the voice menu which will be recorded. Here I select 6001 I set up before. Click on **Record** button, the asterisk will call to 6001, 6001 will show like the following:

👗 X-Lite 🛛 👔	×
Incoming call from: asterisk	
🗲 Answer 🛛 🕿 Ignore	

Click on **Answer** button, then you call speak and start to record what you say. The following illustration will be presented after you click on the **Answer** button.

👗 X-Lite		×	
Talking asteri			
0:00:23	🕿 Har	ig up	

When you want to finish the record, please click on Hang up button.

		List of Custom Voice Menu Prompts Record a new Voice Menu prompt Upload a Voice Menu prompt
#	Name	Options
1	WelcomToATCOM.gsm	Record Again Play Delete

After you finish the recording, please refresh you webpage, and enter into **voice menu prompts** component again, you can see you have had a sound file like the above.

3.17 System Info

From this component, you can easily get the basic system information, it includes: General Information:

```
System Information 🔅 🌣
   General
               Network
                        Disk Usage
                                    Memory Usage
 OS Version:
 Linux IPOx 2.6.22.18-ADI-2008R1astfin-svn #2 Wed May 5 02:54:40 EDT 2010 blackfin unknown
 Uptime:
 19:38:24 up 38 min,
 Load Average: 0.00, 0.00, 0.00
 Version Details:
 Asterisk/1.4.21.2
 VoIPtel GUI version: 2.0.2-ce
 Firmware version: voiptel_ce_ip04-0.3.6
 Server Date & TimeZone: Sun Dec 31 19:38:25 EST 2006
 Hostname:
 IPOx
```

The latest version of IP04 is voiptel_ce_ip04-0.3.6. You can see the version that you are using from **Version Details** in the above illustration.

Network Information:

Disk Usage Information:

System Informat	ion 🌣	
General N	letwork Disk U	Jsage Memory Usage

3.18 Backup

Backup and Restore are two of the mandatory functions of any application. IP04 is no exception. Customers can backup all the files under the /etc/asterisk/ directory and restore them.

Please select the **Backup** option from the vertical menu on the left of the main page, then you can get the following screen:

Click on **Create New Backup** button on the illustration above, you can get the following illustration:

Create New Back	kup	X
File Name:	backup_2010apr26_115450	
	S Cancel	

File Name: give a file name for the backed up file.

Click on **Backup** button, once the backup process is completed, you will see a screen with the backup filename displayed in illustration below.

Manage Configuration Backups						
🔶 Create New Backup						
List of Previous Configuration Backups :						
S.No Name	Date		Options			
1 backup_2010apr26_115450	Apr 26, 2010	Download from Unit	Restore Previous Config	🗶 Delete		

Backup itself is not useful if it cannot be restored, IP04 also has this function. This is a very simple procedure. All you need to do is to click on the **Restore Previous Config** option.

3.19 Active Channels

The channels which are in communication status will be displayed in this component. Please select the **Active Channels** option from the vertical menu on the left, then you can get the following screen:

ATCOM	
[] System Status	Channel Management 🌵
[] Trunks	Refresh Now
[] Outgoing Calling Rules	Active Channels - 0
[] Dial Plans	Refreshing Active Channels in 2 Seconds
[] Users	No Channels Open !!

3.22 Bulk Add

Using bulk add, you can add multi-users one time. You can define the number of the users you want to create.

After click on **Options→Advanced Options→Show Advanced Options**, please select the **Bulk Add** option from the vertical menu on the left, then you can get the following screen:

Bulk Add 🗳	
Bulk Add	
Create New users from CSV list	Create a Range of new users

Click on the **Create a Range of new users** button in the illustration above, the following screen is where you create bulk users.

Bulk Add
Create New users from CSV list Create a Range of new users
Create 5 💙 Users Starting from Extension 6100
Create Users
Tip: Use the 'Modify Selected Users' button from the Users page to edit any options for the created users.

Here I want to create five users, and the extensions starts from 6100, so I select 5 in the **Create** drop-down list, and I set 6100 in the textbox of **User Starting from Extension**.

警报 http://192.168.1.151/		
Vsers added Click Ok to reload GVI		
	确定	

At last, click on **Example** button in the pop-up screen, then click on **Apply Changes** button on the up right corner of the main page.

Please select the **System Status** option in the vertical menu on the left of the main page, you can see you have added five users: 6100, 6101,6102,6103,6104.

3.23 File Editor

After click on **Options→Advanced Options→Show Advanced Options**, please select the **File Editor** option from the vertical menu on the left, then you can get the following screen:

File Editor 🌵 Config Files 💌 New File

From the drop-down list of config files, you can select the file you want to edit or read.

File Editor	Φ	users.conf	*	New File
		Config Files	~	
		extensions.conf		
		followme.conf		
		meetme.conf		
		users.conf		
		ztscan. conf		
		zapscan. conf		
		asterisk.conf		
		queues.conf		
		applyzap.conf	_	
		guipreferences.conf		
		rc_org.conf		
		logger.conf		
		sip.conf		
		enum.conf		
		musiconhold.conf		
		dnsmgr.conf		
		rtp. conf		
		iaxprov.conf		
		sip_notify.conf	¥.	

Here I select users.conf file, so I can see the file and edit to meet my requirement.

3.24 Asterisk CLI

These are some of the available CLI commands that can be executed from the console, you can input the asterisk CLI commands from the web page directly.

After click on **Options→Advanced Options→Show Advanced Options**, please select the **Asterisk CLI** option from the vertical menu on the left, then you can get the following screen:

	ATCOM
🌵 Asterisk CLI> he	lp
Command> help	
I I	Execute a shell command
abort halt	Cancel a running halt
agent logoff	Sets an agent offline
agent show	Show status of agents
agent show online	Show all online agents
agi debug	Enable AGI debugging
agi debug off	Disable AGI debugging
agi dumphtml	Dumps a list of agi commands in html format
agi show	List AGI commands or specific help
cdr status	Display the CDR status
core set debug channel	Enable/disable debugging on a channel
core set debug	Set level of debug chattiness
core set debug off	Turns off debug chattiness

Here I input help command in the textbox, so I can get all the command which I can use in CLI mode.

3.25 Network Settings

In order to give a static and permanent IP address for IP-04, you have to set it in web GUI. After you enter into the web GUI of IP-04, you can try to configure IP address according to the following steps:

After click on **Options** \rightarrow **Advanced Options** \rightarrow **Show Advanced Options**, please select **Network Settings** option from the vertical menu on the left of main page, the following screen is where you configure the network:

eth0 In	terface
DHCP:	auto 🗸
Hostname:	IPOx
Domain:	openippbx.org
IP address:	192.168.1.184
Subnet mask:	255. 255. 255. 0
Gateway:	192.168.1.1
DNS:	192.168.1.1
NTP:	pool.ntp.org

In the drop-down list of DHCP, you can see the following three options:

- 1. DHCP: yes: IP04 will obtain the dynamic IP address from your router.
- 2. DHCP: auto: IP04 will use the static IP specified below and ping the default gateway. When there is no response from the default gateway, the IP-04 will switch to dynamically obtain the IP address from your router.
- 3. DHCP: no: IP04 will use the static IP address set below.

If you want to get static and permanent IP address, please do not select "yes", after configure other parameters, please click "save" in the bottom of your page to save your setting.

3.26 Firmware Update

You can update to the latest version for IP04 by TFTP.

3.26.1 Download the Latest Firmware File and Set up TFTP Server.

- Download the md5 file from <u>http://www.atcom.cn/downloads/IPPBX/Firmware/IP04-v0.3.6-100506.md5</u>, then put it in your TFTP server root directory.
- 2) Run your TFTP server, and I set up it like the following:

🏘 Iftpd32 by Ph. Jounin	
Current Directory E:\upgrade Server interface 192.168.1.111 Tftp Server Tftp Client DHCP server Syslog server	<u>B</u> rowse Show <u>D</u> ir
Current Action Listening on port 69	
About <u>S</u> ettings	<u>H</u> elp

"E:\upgrade" is the root directory of my TFTP server, "192.168.1.111" is the IP Address of my TFTP server.

3.26.2 Update for IP04 from Web Page

After click on **Options** Advanced **Options** Show Advanced **Options**, please select **Firmware update** option from the vertical menu on the left of main page, the following screen is where you update for IP04:

C HTTP URL	TFTP Server	
TFTP Server :		+ Go
File Name 🛈 :		
Reset Configs ①:	1	

TFTP Server: enter the IP Address of your TFTP server in this textbox.

File Name: enter the update file name

Reset Configs: if you choose reset Configs, it will delete all of your configuration you have done before.

After setting up, please click on Go button to update for IP04.

Power off and power on the IP-04, wait for several minutes. When the TEL port LEDs light up, it means the update is finished and you have the latest firmware.

3.27 Call Detail Records

This component provides the record of all incoming and outgoing calls including the channels used and duration of calls. After click on **Options** \rightarrow **Advanced Options**, please select the **Call Detail Records** option from the vertical menu on the left, then you can get the following screen:

CI	DR	Viewe	er (Cl	DR−CSV)	φ											
С	E	DR v	iew	/er <<	prev ne	xt>	>									
		ing 1-2													View:	25 🗸
(mo		t recen						_

8	3		6005	6600	DLPN_DialPlan1	""6005"" <6005>	Zap/4-1		VoiceMail	6005@default&6006@default	2010-04-21 05:23:47	21	2010-04- 21 05:24:05		15	ANSWERED
9	9		6005	6300	DLPN_DialPlani	″″6005″″ ≺6005>	Zap/4-1		MeetMe	6300 Ms	2010-04-21 04:51:41	21	2010-04- 21 04:52:56	75	73	ANSWERED

You can click on the **prev** to look up the last page for call record, and click on the **next** to look up the **next** page for call record, you can also set the value from the drop-down list of **view** which means how many calls will be displayed in one page.

Chapter 4 an Application Case of IP04

Figure: Network Topology

In the network topology above: user 6020 and user 6001 will be registered to IP04, user 6030 will be registered to IP04, analog phone 6005 is connected to FXS port of IP04. After configuration, it will realize the following function:

- 1) The internal user 6005 and user 6001 can call each other directly.
- 2) 6005 and 6001 can dial-out through IP04 to PSTN.
- 3) 6005 and 6001 can get incoming calls from PSTN by IP04.
- 4) 6030 can call-out to PSTN and get incoming call from PSTN through IP04.
- 5) User 6001 and 6030 can call each other through VoIP trunk, although they are registered to different IP PBX.
- 6) User 6020, 6005 and 6001 can call each other directly, although they are not in the same network segment.

4.1 How to Make Internal Calls through IP04

4.1.1 Access to the Web Page of IP04 by Browser

After connecting IP04 to LAN, please open your browser of PC with windows OS and input the IP Address of IP04 (the default IP address is 192.168.1.100), then you can get the following screen:

ATCOM	
[] Home	Velcome to VoIPtel CE
Please login	Asterisk™ Configuration Engine
	Username:
	Password:
	Login

Please input the default Username: admin; Password: atcom in the presented screen above. When you login successfully, you can get the configuration web page as below:

ATCOM										Apply Cl	nanges ?	Logout
🖸 System Status	Sys	tem Status 🕻	h							Սրց	rade to Voll	Ptel SE

4.1.2 Add up Users from Web Page of IP04

1) Add up a DialPlan

Before you add up user, you have to add up a DialPlan, please click on **Dial Plans** \rightarrow **New DialPlan**, I add up a DialPlan like the following:

DialPlan Name:	DialPlan1	
Include Outgoing Calling Rules:		You do not have any calling Rules defined ! <u>click here</u> to manage calling rules.
Include Local Contexts:	✓default ✓parkedcalls ✓d	conferences 🗸 ringgroups 🗸 voicemenus 🗸 queues 🗸 voicemailgroups 🗹 directory
		S Cancel

After configuring, please click on **Save** button, and click on **Apply Changes** button in up right corner of the main page.

2) Add up SIP user 6001

After logging into the web page of IP04, please click on Users \rightarrow Create New User, I configure user 6001 like the following:

Create New User X
General : Extension: 6001 ① Name: 6001 ① DialPlan: DialPlani ♥ ① CallerID: 6001 ③ OutBound CallerID: ③
Image: Second state of the second s
Technology SIP ① VIAX ① Analog Station: None v ① flash ①: 750 rxflash ①: 1250 Codec Preference : First : u-law v Second : GSM v Third : None v Fourth : None v Fifth : None v
VoIP Settings MAC Address : Image:
Other Options 3-Way Calling 1 In Directory 1 Call Waiting 1 CTI 1 V Is Agent 1 Enable Call Record 1 Pickup Group: 1 V
🚫 Cancel 🗹 Update

At last, please click on **Update** button, and click on **Apply Changes** button in up right corner of the main page.

3) Add up an Analog user 6005

After logging into the web page of IP04, please click on Users→ Create New User, I add a user 6005 like the following:

Create New User X
General : Extension: 6005 ① Name: 6005 ① DialPlan: DialPlani V ① CallerID: 6005 ③ OutBound CallerID: ③
Image: Second state of the second s
Technology SIP IAX Analog Station: Port 1 • ① flash 1: 750 rxflash 1: 1250 Codec Preference : First : u-law • Second : GSM • Third : None • Fourth : None • Fifth : None • Fifth : None •
VoIP Settings MAC Address : ① Image: Simple state stat
Other Options 3-Way Calling (Î) In Directory (Î) Call Waiting (Î) CTI (Î) Is Agent (Î) Enable Call Record (Î) Pickup Group: 1
○ Cancel Vpdate

At last, please click on **Update** button, and click on **Apply Changes** button in up right corner of the main page.

Please pay attention to the **Technology** component, there is an **Analog Station** drop-down list, I choose port 1 in which port the analog phone plugs.

4.1.3 Register a SIP user 6001 in AT610

After logging into the web page of IP Phone AT-610, please select VOIP option, I register the 6001 as the following illustration:

\frown			IP Phone	÷		
ATCOM '	Current Status Network VOIP	Advanced Dial-pe	er <u>Config Manage</u>	<u>Update</u>	<u>System Manage</u>	
					I	Public SIP Configuation
		Basic Setting				
		Register status	Registered		Proxy Server Address	
		Server Address	192.168.1.10		Proxy Server Port	
		Server Port	5060		Proxy Username	
		Account Name	6001		Proxy Password	
		Password			Domain Realm	
		Phone Number	6001		Enable Register	
		Display Name	6001			
		•		AP	PLY	
				Advan	ed Set	

After configuring, please click on the **APPLY** button. Now you can call each other directly between user 6001 and 6005.

4.2 How to Make a Call to Outside through PSTN

In order to dial out to PSTN with IP04, you need an analog trunk, an outgoing calling rule, a dial plan and a user. Here I will give the simple configuration steps which show how to make a call to outside, for detail configuration, you can refer to chapter 3.

4.2.1 Create an Analog Trunk

After logging into the web page of IP04, please click on **Trunks** \rightarrow **Analog Trunks**, I configure an analog trunk like the following:

Edit Analog Trunk	X						
Channels:	. ☑ 2						
Irunk Wame 🛈 :	trunk2						
CallerID :							
Normally you should not have to adjust your analog ports beyond the initial calibration. Should you still need to fine tune your audio settings, please use the adjustments at the right:							
	Advanced Options						
Busy Detection 🛈 : 🛛 Yes 💌	Busy Count 🛈 : 3						
Ring Timeout (1) : 8000							
Answer on 🛛 🛛 💌 Polarity Switch 🛈 :	Hangup on 🛛 💌 Polarity Switch 🛈 :						
Call Progress 🛈 : 🛚 💌	Progress Zone 🛈 : 🖸						
Use CallerID 🛈 : 🛛 Yes 💌	Caller ID Start 🛈 : Ring 💌						
CallerID 🛈 : 🛛 As Received 💌	Pulse Dial 🛈 : 🛚 🕅 💌						
CID Signalling (1) : DTMF (Denmark, S	weden, Holland) 💙 mailbox : 🔽 🗸						
Flash Timing 🛈 : 750	Receive Flash Timing 🛈 : 1250						
	S Cancel ☑ Update						

At last, please click on **Update** button, and click on **Apply Changes** button in up right corner of the main page.

4.2.2 Create an Outgoing Calling Rule

After logging into the web page of IP04, please click on **Outgoing Calling Rules**→ **New Calling Rule**, I configure an outgoing calling rule like the following:

Edit Calling Rule	X
Calling Rule Name 🛈 : outgoing1	
Pattern 🛈 : _2X.	
🗌 🗆 Send to Local Destination 🛈 ———————————————————————————————————	Ī
Destination :	
Send this call through trunk:	Ī
Use Trunk 🛈 trunk2 💌	
Strip 🛈 1 digits from front	
and Prepend these digits 🛈 📃 before dialing	
🗌 Use FailOver Trunk 🕕 :	Ī
fail over Trunk 🛈 siptrunkt 💟	
Strip 🛈 📃 digits from front	
and Prepend these digits 🛈 📃 before dialing	
🚫 Cancel 🗹 Save	

At last, please click on **Save** button, and click on **Apply Changes** button in up right corner of the main page.

4.2.3 Create a Dial Plan

After logging into the web page of IP04, please click on **Dial Plans** \rightarrow **New DialPlan**, I configure a dial plan like the following:

Edit DialPlan	
DialPlan Name:	DialPlan2
Include Outgoing Calling Rules:	♥ outgoing1
Include Local Contexts:	♥default ♥parkedcalls ♥conferences ♥ringgroups ♥voicemenus ♥queues ♥voicemailgroups ♥directory
	© Cancel ☑ Save

At last, please click on **Save** button, and click on **Apply Changes** button in up right corner of the main page.

4.2.4 Create a User

I will use the user 6001 I created before, here I need to reselect a dial plan for 6001, here I need to use DialPlan2, so I select DialPlan2 in the DialPlan drop-down list. Now I can call out with prefix 2, if the caller number is 10086, I will dial 210086.

4.3 How to Get an Incoming Call from outside

In order to get an incoming call from outside with IP04, you need an analog trunk, an incoming calling rule, a destination (here I use IVR). Here I will give the simple configuration steps which show how to get an incoming call from outside, for detail configuration, you can refer to chapter 3.

4.3.1 Create an Analog Trunk

I use the trunk2 I created in 4.2.1

4.3.2 Create an Incoming Calling Rule

After logging into the web page of IP04, please click on **Incoming Calling Rules** \rightarrow **New Incoming Rule**, I configure an incoming calling rule like the following:

Edit Incoming Calling Rule, Trunk: trunk_1 , Time Interval: none X
Trunk : trunk2 💌
Time Interval : None (no TimeIntervals matched) 💌
Pattern 🛈 : S
Destination : VoiceMenu ivr 💌
🚫 Cancel 🔽 Update

At last, please click on **Update** button, and click on **Apply Changes** button in up right corner of the main page.

4.3.3 Create a Voice Menu

After logging into the web page of IP04, please click on Voice Menus→ Create New VoiceMenu, I create a voice menu like the following:

Edit Voice l en	u voicemenu-custom-2			X			
Name:	voicemenu1	٦	Advanced Edit				
Extension:	7002						
☑ ①	Allow Dialing Other Extensions						
Actions 🛈	Answer the call		V 🛛 🔇	3			
	Play record/WelcomToATCOM & Donot Listen f	or KeyPress events	V 🛇 🔇	3			
	Goto User 6001		👽 🔕 🔇	3			
Add new Step:	Select an Option 💌						
	🛈 Allow KeyPress Events						
0							
1 Goto User 6001							
2 Got	2 Goto User 6005						
3							
4							

When the call comes from port 2, the system will play a record sound file, if the caller presses 1, user 6001 will ring, if the caller presses 2, user 6005 will ring. If the caller does not press any key, the call will go to 6001.

You can also configure IP04 to let 6030 call outside and get incoming call by IP04, the steps are the same as IP04, you can refer to configuration of IP04.

4.4 How to Call Each Other Directly from Different Network

Segment.

Take the user 6020, 6005 and 6001 for example, I will configure router, users and IP04, then the three users can call each other directly.

1) Set up router

From the web page of your router, please configure the IP address, subnet mask and default gateway of WAN port, I configured a static IP Address 172.16.1.1; Subnet Mask: 255.255.0.0; Default Gateway: 172.16.1.254. You can refer to the following:

LINKSYS [®] A Division of Cisco Systems, Inc.						Firmware	Version: 1.05.00
				Ether	fast® Cable/	DSL Router	BEFSR41 V3
Setup	Setup Basic Setup	Security	Applications & Gaming DDNS	Administration	Status Advanced F	Douting	
Internet Setup Internet Connection Type	Static I IP Addre Subnet I Default (ss: Mask: Jateway:	▼ 172 . 16 . 1 255 . 255 . 0 172 . 16 . 1	. 1 . 0 . 254	Auvanceu P	The Basic Se where basis performed. (Internet Se will require DNS inform settings car	Setup screen is c configuration is
Optional Settings (required by some ISPs)	Static Df Static Df Static Df Host Na Domain MTU:	NS 2: NS 3: me:	0 · 0 · 0 0 · 0 · 0 0 · 0 · 0 0 · 0 · 0 Cenable • Disa	· 0 · 0		you should password fi Administrat >Managem Completing Setup secti required to specific ISP the table be	rom the <i>ion-</i> the Internet on is all that is set up for your . Please look at low to configure for your Internet

From the web page of your router, please configure the IP address, subnet mask and DHCP, I configure them like the following:

Network Setup Router IP	Local IP Address: Subnet Mask:	192 . 168 . 1 . 254 255.255.255.255.0 ♥	More
Network Address Server Settings (DHCP)	Local DHCP Server: Start IP Address: Number of Address: DHCP Address Range: Client Lease Time: WINS:	 Enable Disable 192.168.1.1 192.168.1.1 to 192.168.1.254 minutes (0 means one day) . 0 . 0 . 0 	Cisco Systems
		Save Settings Cancel Changes	արիրություն

From the webpage of your router, please configure port range forwarding like the following:

LINKSYS [®] A Division of Cisco Systems, Inc.							Firmwar	e Version: 1.05.00
Applications					Ethe	erfast® Cable	/DSL Router	BEFSR41 V3
& Gaming	Setup	Security	Applicat & Gam		dministration	Status		
	Port Range	Forwarding	Po	rt Triggering	I UF	PhP Forwarding	3	DMZ
							Port Rang	ge Forwarding
Port Range Forwarding								e Forwarding can set up public
	Port Range Services on your network When users from the							
	Application	Start	End	Protocol	IP Address	Enabled	Internet ma	ake certain n your network,
	IAX2	4569 to	4569	Both 💌	192.168.1.10			can forward
		0 to	0	Both 💌	192.168.1. 0		computers	equipped to

The user 6020 uses IAX2, the port number is 4569, 192.168.1.10 is the IP address of IP04.

2) Add an IAX user 6020 in IP04

After logging into the web page of IP04, please click on Users \rightarrow Create New User, I configure 6020 like the following:

Create New User X
General : Extension: 6020 ① Name: 6020 ① DialPlan: DialPlan1 ♥ ① CallerID: 6020 ① OutBound CallerID: 6020 ①
✓ Enable Voicemail for this User ① VoiceMail Access PIN code: ① Mailbox: 6020 ① Email Address: ①
Ichnology Image: SIP ① Image: Station: Image: Sipe ① Image: Station: Image: Sipe ② Image: Station: Image: Sipe ③ Image: Sipe ③ Image: Sipe ③ Image: Sipe
VoIP Settings MAC Address : Image:
Other Options 3-Way Calling 1 In Directory 1 Call Waiting 1 CTI 1 V Is Agent 1 Enable Call Record 1 Pickup Group: 1 V
Scancel ☑ Update

At last, please click on **Update** button, and click on **Apply Changes** button in up right corner of the main page.

3) Set up AT-620 and register an IAX2 user 6020

After logging into web page of IP Phone AT-620, please select **Network** option to enter the screen of configuring IP Address. I set up a static IP Address: 172.16.1.2; Netmask: 255.255.0.0; Gateway: 172.16.1.254. After finishing the configuration, please click on the **Apply** button. You

can refer to the following screen:

ATCOM	Current Status Network VOIP A	dvanced <u>Dial-peer</u>	IP P		
WAN Config		WAN Status			
LAN Config		Active IP			172.16.1.2
		Current Netmask			255.255.0.0
		Current Gateway			172.16.1.254
		MAC Address			00:09:45:56:fd:ce
		Get MAC Time			20090915
		WAN Setting			
		Static 💿			PPPOE O
		Auto DNS			
		Static IP Address		172.16	1.2
		Netmask		255.25	5.0.0
		Gateway		172.16	1.254
		DNS Domain			
		Primary DNS		202.96	.134.133
		Alter DNS		202.96	.128.68
			1		(APPLY)

Please select the **VOIP** option, then select the **IAX2** option, I register the IAX2 user 6020 as the following illustration:

470011		IP Phone		
ATCOM '	Current Status Network VOIP	Advanced Dial-peer Config Manage Update	<u>System Mana</u>	uge
		IAX2		
• <u>SIP 1</u> • <u>SIP 2</u>		Register Status	Registered	
• <u>IAX 2</u>		IAX2 Server Addr	172.16.1.1	
		IAX2 Server Port	4569	
		Account Name	6020	
		Account Password	••••	
		Phone Number	6020	
		Local Port	4569	
		Voice Mail Number	0	
		Voice Mail Text	mail	
		Echo Test Number	1	
		Echo Test Text	echo	
		Refresh Time	60	Seconds
		Enable Register		
		Enable G.729		
		AP	PLY	

After configuring, please click on the **APPLY** button.

Attention: here you must register IAX2 user instead of SIP user, because the user 6020 is not in the same network segment as IP04. If you use SIP user, you can not get sound when the communication is established.

Now you can call each other among 6020,6001 and 6005 directly.

4.5 How to Call through VoIP Trunk

4.5.1 Call from IP04 to IP08

In order to call from IP04 to IP08, I will create a SIP user in IP08 for the SIP trunk in IP04, create

a SIP trunk, an outgoing call rule and a dial plan in IP04.

Add an SIP user 6035(it will be used as SIP trunk in IP04) in IP08, after logging into the web page of IP08, please click on Users→ Create New User, I add the user 6035 like the following:

Create New User			
General : Extension: 6035 ① Name: 6035 ① DialPlan: DialPlani ① CallerID: 6035 ③ OutBound CallerID: 6035 ③			
Image: Second state of the second s			
Technology SIP ① VIAX ① Analog Station: None v ① flash ①: 750 rxflash ①: 1250 Codec Preference : First : u-law v Second : GSM v Third : None v Fourth : None v Fifth : None v			
VoIP Settings MAC Address : ① Line Number : 1 SIP/IAX Password: 6035 ① NAT: ② ① Can Reinvite: ③ DIMF Mode: RFC2833 ♥ ① insecure: very ♥ ①			
Other Options 3-Way Calling ① In Directory ① Call Waiting ① CTI ① Is Agent ① Enable Call Record ① Pickup Group: 1			
🚫 Cancel 🗹 Update			

At last, please click on **Update** button, and click on **Apply Changes** button in up right corner of the main page.

Add a SIP user 6030 in IP08 for AT-620, the way is the same as adding 6035.

 Add a VoIP trunk in IP04, after logging into the webpage of IP04, please click on Trunks→VOIP Trunks→New SIP/IAX Trunk, I configure a SIP trunk1 like the following:

ATCOM	")
ATCON	

Edit SIP trunk 6035	X
Provider Name 🛈:	siptrunk1
Hostname :	192.168.1.20
Username :	6035
Fromuser :	
Fromdomain :	6035
Password :	6035
Contact Ext.:	s
Insecure Type:	very 💟 🛈
	First : u-law V Second : a-law V Third : GSM V
CallerID 🛈 :	Fourth : G.726 V Fifth : None V
🗌 Enable Remote MWI :	
	S Cancel

After configuring, please click on **Add** button, and click on **Apply Changes** button in up right corner of the main page.

3) Create an outgoing calling rule in IP04, after logging into the webpage of IP04, please click on **Outgoing Calling Rules→New Calling Rule**, I configure an outgoing2 rule like the following:

AT	CO	M	1

Edit Calling Rule	
Calling Rule Name 🛈 : outgoing2	
Pattern 🛈 : _9.	
Send to Local Destination (1)	
Destination :	
Send this call through trunk:	
Use Trunk 🛈 siptrunk1 💌	
Strip 🕕 1 digits from front	
and Prepend these digits $\textcircled{0}$ before dialing	
Use FailOver Trunk ① :	
fail over Trunk 🛈 siptrunkt 💌	
Strip 🛈 📃 digits from front	
and Prepend these digits 🛈 📃 before dialing	
Save	

After configuring, please click on **Save** button, and click on **Apply Changes** button in up right corner of the main page.

Create a dial plan in IP04, after logging into the webpage of IP04, please click on Dial Plans→New DialPlan, I configure a dialplan2 like the following:

Edit DialPlan	
DialPlan Name:	DialPlan2
Include Outgoing Calling Rules:	♥ outgoing1 ♥ outgoing2
Include Local Contexts:	♥default ♥parkedcalls ♥conferences ♥ringgroups ♥voicemenus ♥queues ♥voicemailgroups ♥directory
	© Cancel 🗹 Save

After configuring, please click on **Save** button, and click on **Apply Changes** button in up right corner of the main page.

In configuration screens of 6001 and 6005, please select dialplan2 in the **DialPlan** drop-down list Now you can call from 6001 and 6005 to 6030 by dialing 96030

4.5.2 Call from IP08 to IP04

In order to call from IP08 to IP04, I will create a SIP user in IP04 for the SIP trunk in IP08, create a SIP trunk, an outgoing call rule and a dial plan in IP08.

1) Add a user 6008 in IP04

Add a SIP user: 6008, after logging into the web page of IP04, please click on Users→ Create New User, I add a user 6008 like the following:

www.atcom.cn

Create New User
General : Extension: 6008 ① Name: 6008 ① DialPlan: DialPlan1 ♥ ① CallerID: 6008 ① OutBound CallerID: 6008 ①
Enable Voicemail for this User Image: Im
Technology ✓ SIP ① ✓ IAX ① Analog Station: None ① flash ①: 750 rxflash ①: 1250 Codec Preference : First : u-law Second : GSM Third : None ✓ Fifth : None
VoIP Settings MAC Address : Image:
Other Options 3-Way Calling (1)
🚫 Cancel 🗹 Update

At last, please click on **Update** button, and click on **Apply Changes** button in up right corner of the main page.

2) Create a SIP trunk in IP08

Add a VoIP trunk in IP08, after logging into the webpage of IP08, please click on **Trunks→VOIP Trunks→New SIP/IAX Trunk**, I configure a SIP trunk like the following:

Create New SIP/IAX trunk	X
Туре:	SIP 🗸
Provider Name 🛈:	siptrunktoIP04
Hostname :	192.168.1.10
Username :	6008
Fromuser :	
Fromdomain :	
Password :	6008
Contact Ext.:	
Insecure Type:	very 🗸 🛈
	Cancel

After configuring, please click on **Add** button, and click on **Apply Changes** button in up right corner of the main page.

3) Create an outgoing calling rule in IP08

After logging into the webpage of IP08, please click on **Outgoing Calling Rules**→**New Calling Rule**, I configure an outgoing1 rule like the following:

New CallingRule	X
Calling Rule Name 🛈 : outgoing1	
Pattern 🛈 : _9.	
🔽 🗖 Send to Local Destination 🛈 ———————————————————————————————————	Ī
Destination :	
Send this call through trunk:	Ī
Use Trunk 🛈 siptrunktoIP04 💌	
Strip 🛈 1 digits from front	
and Prepend these digits 🛈 📃 before dialing	
🗌 Use FailOver Trunk 🕕 :	Ī
fail over Trunk 🛈 🔽	
Strip 🛈 📃 digits from front	
and Prepend these digits 🛈 👘 before dialing	
Cancel V Save	

After configuring, please click on **Save** button, and click on **Apply Changes** button in up right corner of the main page.

4) Create a dial plan in IP08

After logging into the webpage of IP08, please click on **Dial Plans→New DialPlan**, I configure a dialplan1 like the following:

Edit DialPlan	
DialPlan Name:	DialPlan1
Include Outgoing Calling Rules:	♥ outgoing1
Include Local Contexts:	Vdefault Vparkedcalls Vconferences Vringgroups Vvoicemenus Vqueues Vvoicemailgroups Vdirectory
	© Cancel ☑ Save

After configuring, please click on **Save** button, and click on **Apply Changes** button in up right corner of the main page.

In configuration screens of 6030, please select dialplan1 in the **DialPlan** drop-down list. Now you can call from 6030 to 6001 and 6005 by dialing with prefix 9.

4.6 How to Transfer Files between Windows PC and IP04

Using WinSCP software, it is the most convenient way to transfer files between windows PC and IP04. Open your WinSCP software, enter the IP Address, username, password of IP04 like the following screen:

			ATCON
VinSCP Login			? 🔀
Session Stored sessions Directories SSH Preferences	Session <u>H</u> ost name 192.168.1.10 <u>U</u> ser name root Private <u>k</u> ey file Hint: Use "Stored session	Password ************************************	
<			
Advanced options		Login	Close

At last, click on **Login** button, then you can get the following screen:

				2 / (re 🛩 🖕 • •	🔁 / (m. 💌) 💠 + 👳 - 🕅 🖾 🖉 🖼

The left part of the screen displays directories and files of your windows PC, the right part of the screen displays directories of IP04.

If you want to transfer a file from windows PC to IP04, you just need to choose the file and drag it to the directory of IP04, at last, click on **copy** button in the popping-up screen like the following:

Сору
Copy file 'atcom_ip02_04_08-0.3.4-1207.md5' to remote directory
/persistent/
Copy Cancel <u>M</u> ore >>
