

Configuring via Keypad

Configuring the phone

Language Settings: The default language of the phone is English. It supports Chinese, Italian, Polish, Turkish, French, German, Portuguese, Spanish, etc. Set the language as: Press Menu->Setting ->Basic Settings->Language to enter the language list.

Note: The available language maybe different, it depends on the language packs currently loaded to the IP phone.

Network Setting: Press Menu->Setting->Advanced Settings, enter the password, and choose Network -> WAN Port /PC Port /VLAN/Webserver Type/802.1x Settings/VPN Option to enter the network relating configuration page.

Account Setting: Press Menu->Settings->Advanced Settings, enter the password, and choose Accounts to configure the account settings.

Configuring via Web Page

Press OK button on the keypad of the phone to enter the Status page and find the IP address of the IP phone. Enter it (for example http://192.168.3.35) into the address bar of web browser. The default login name and password are **admin/admin**.

Note: Please locate your PC in the same network segment of the IP phone(192.168.3.X) to access the web configuration page. Please consult your network administrator or service provider for help.

Network Settings: Choose Network->Basic->WAN

DHCP: By default the phone attempts to contact to a DHCP Server in your network in order to obtain its valid network settings, e.g. IP address, sub mask, gateway, DNS server, etc.

Static IP Address: If your phone cannot contact a DHCP Server for any reason, you need to enter the network settings manually via Static IP Address. Please contact your internet administrator for more details.

PPPoE: If you are using the xDSL Modem, you can connect your phone to the internet via PPPoE mode. Please contact your ISP for the **User Name** and **Password** for internet access.

Note: Using the wrong network parameters may result in inaccessibility of your phone and may also have an impact on your network performance! Please contact your network administrator!

Account Setting: Choose Account->Account X

Parameter:

Register Status:	Shows the register status of the IP phone.
Account Active:	You can choose on/off to enable/disable the account respectively.
Label:	Shown on the LCD for users to identify the account.
User Name:	Provided by ISP for registration.
Display Name:	Shown as Caller ID when making a phone call.
Register Name:	Authenticated ID for authentication, provided by ISP.
Password:	Provided by ISP for registration.
SIP Server:	Server for registration, provided by ISP.

Register Status Icons in the LCD

the account is registered successfully.

Register failed.

Please contact your service provider for more account details.

The manual is only for reference, please take the object as the standard.

Quick Installation

Packing List

Assembling the Phone

1. Attach the Stand, as shown below:

2. Connect Handset and Headset, as shown below:

Note: Headset is not included, should be purchased separately.

3. Connect Network and Power

There are two ways for network and power source connections. You can either connect the phone to the AC Power directly by using the power adapter or to a PoE(Power Over Ethernet)compliant switch or hub. Your system administrator will advise you on which one to use.

Note: If inline Power (PoE) is provided, do not install the AC adapter. Make sure the Ethernet cable and switch/hub are PoE compliant.

The phone can also share the network connection with other network devices such as PC. Connect the phone's PC Port and computer's Network Port together using an Ethernet cable, as shown below:
