DECToverIP / SIP

User's Guide

www.aastra.com

AASTRA

Welcome

Thank you for choosing an Aastra product. Our product stands for highest quality standards combined with high-quality design.

The following User's Guide will assist you in using your Aastra DECT telephone and provide answers to all your most important questions. If you should require further technical support or information about other Aastra products, please contact the person responsible for your system or get in touch with your local dealer.

You can also find further information about these devices and other products on our website.

We hope you enjoy using your Aastra DECT telephone

About this User's Guide

Your handset can be operated on different communications systems.
This User's Guide describes the handset and its functions on the DECToverIP with SIP system. This system is made up of base stations (also known as RFPs) and controlled using OpenMobilityManagement. Communication is carried out according to a Session Initiation Protocol (SIP) and provides call control on the Internet.

Contents

VoIPon   www.voipon.co.uk   sales@voipon.co.uk   Tel: +44 (0)1245 808195   Fax: +44 (0)1245 808299

General information

Aastra 610d
- 3 softkeys (programmable) / 2 sidekeys
- Caller list for 30 entries
- Redial list for 20 entries
- Local phone book for 100 entries
- Connection socket for headset
- Safety class IP 50

Aastra 620d
- 1 hotkey / 3 sidekeys / 3 softkeys (programmable)
- Caller list for 50 entries
- Redial list for 30 entries
- Local phone book for 200 entries
- Headset connection via cable or *Bluetooth*
- Micro SD card for device-specific settings (optional)
- Mini USB connection
- Safety class IP 50
Aastra 630d
- 1 hotkey / 3 sidekeys / 3 softkeys (programmable)
- 1 emergency call key
- Caller list for 50 entries
- Redial list for 30 entries
- Local phone book for 200 entries
- Sensor for "Mandown"
- Headset connection via cable or *Bluetooth*
- Micro SD card for device-specific settings (optional)
- Mini USB connection
- Safety class IP 65 (dust and water spray protected)

VoIPon   www.voipon.co.uk   sales@voipon.co.uk   Tel: +44 (0)1245 808195   Fax: +44 (0)1245 808299

Prescribed use / Declaration of Conformity

This product can be used in all EU member states on an Aastra DECToverIP system (SIP). The telephone complies with the radio-specific European harmonised standards for DECT. The CE mark on the product confirms its conformance with the technical directives for user safety and electromagnetic compatibility, the relevant declaration of conformity according to European Directive 99/5/EC applies at the date of issue.
The declaration of conformity can be viewed on the Aastra homepage on the Internet.

This device is also approved for use in North America (USA and Canada). For more information on this, read the safety information on page 3.

Please also use the other documentation that was supplied with the parts of your telephone system.

Notes on safety

It is imperative to observe the following instructions when setting up, connecting and using the telephone.
- Place the charger cradle on a non-slip surface.
- Lay the connection cable so it cannot cause accidents!
- Important instructions for using the battery are given on page 9.
- Do not place the handset or the charger cradle
  - close to heat sources
  - in direct sunlight
  - next to other electrical devices
- Protect your telephone from moisture, dust, aggressive liquids and gases.
- Only use approved accessories.
- Only use the plug-in power supply supplied (23-00-1061-00).
- Always switch off the handset before removing the battery.
- Never
  - open the charger cradle or the handset (except for the battery compartment cover) yourself!
  - touch the plug contacts with pointed metallic objects!
  - carry the charger cradle by the connection cable!
- Only clean your telephone with a slightly moist cloth.
- Do not use your telephone in explosive areas.
- Do not use the Aastra 610d and 620d in wet rooms (e.g. bathrooms).

Note for wearers of hearing aids

Before using the handset, users of hearing aids should note that radio signals can affect hearing aids and, if powerful enough, can cause an unpleasant buzzing sound.

Communications Regulation Information

FCC Notices (U.S. Only)

This device complies with part 15 of the FCC Rules. Operation is subject to the following two conditions:
(1) This device may not cause harmful interference, and (2) this device must accept any interference received, including interference that may cause undesired operation.
Modifications not expressly approved by this company could void the user's authority to operate the equipment.
NOTE: This equipment has been tested and found to comply with the limits for a Class B digital device, pursuant to Part 15 of the FCC Rules. These limits are designed to provide reasonable protection against harmful interference in a residential installation. This equipment generates, uses and can radiate radio frequency energy and, if not installed and used in accordance with the instructions, may cause harmful interference to radio communications. However, there is no guarantee that interference will not occur in a particular installation. If this equipment does cause harmful interference to radio or television reception, which can be determined by turning the equipment off and on, the user is encouraged to try to correct the interference by one or more of the following measures:
- Reorient or relocate the receiving antenna.
- Increase the separation between the equipment and receiver.
- Connect the equipment into an outlet on a circuit different from that to which the receiver is connected.
- Consult the dealer or an experienced radio/TV technician for help.

Health and Safety Information

Exposure to Radio Frequency (RF) Signals:
The wireless phone is a radio transmitter and receiver. It is designed and manufactured not to exceed the emission limits for exposure to radio frequency (RF) energy set by the Federal Communications Commission (FCC) of the U.S. Government. These limits are part of comprehensive guidelines and establish permitted levels of RF energy for the general population. The guidelines are based on the safety standards previously set by both U.S. and international standards bodies. These standards include a substantial safety margin designed to assure the safety of all persons, regardless of age and health.
This device and its antenna must not be co-located or operating in conjunction with any other antenna or transmitter.

This EUT has been shown to be capable of compliance for localized specific absorption rate (SAR) for uncontrolled environment/general population exposure limits specified in ANSI/IEEE Std. C95.1-1992 and had been tested in accordance with the measurement procedures specified in FCC/OET Bulletin 65 Supplement C (2001) and IEEE 1528-2003.

Industry Canada (Canada only)

Operation is subject to the following two conditions: (1) This device may not cause harmful interference, and (2) this device must accept any interference received, including interference that may cause undesired operation of the device.

Privacy of communications may not be ensured when using this telephone.

Exposure to Radio Frequency (RF) Signals:

The wireless phone is a radio transmitter and receiver. It is designed and manufactured not to exceed the emission limit for exposure to radio frequency (RF) energy set by the Ministry of Health (Canada), Safety Code 6. These limits are part of comprehensive guidelines and established permitted levels of RF energy for the general population. These guidelines are based on the safety standards previously set by international standard bodies. These standards include a substantial safety margin designed to assure the safety of all persons, regardless of age and health.

This device and its antenna must not be co-located or operating in conjunction with any other antenna or transmitter.

This EUT has been shown to be capable of compliance for localized specific absorption rate (SAR) for uncontrolled environment/general population exposure limits specified in ANSI/IEEE Std. C95.1-1992 and had been tested in accordance with the measurement procedures specified in FCC/OET Bulletin 65 Supplement C (2001) and IEEE 1528-2003.

Installation

Inserting the standard battery

Aastra 610d, 620d
Push the battery cover downwards until it disengages from the locking mechanism and lift off. Insert the battery with the contacts downwards. Replace the battery cover and push upwards until it snaps into place.
Aastra 630d
Undo the two screws on the back of the handset with a suitable tool (e. g. coin) and remove the cover. Insert the battery with the contacts downwards, close the battery compartment with the cover and screw back in place. Do not damage the rubber seal when assembling.
Inserting the power battery

You can order a battery with higher capacity (power battery) for the **Aastra 620d** and **630d** as an accessory (see page 67).
This battery has a thicker design so you need another battery cover that protrudes approx. 6 mm beyond the rear of the device.
Install the new battery cover as described above.
In the **Aastra 620d** you should remove any installed fixing bracket beforehand.
Installing/removing a mounting bracket or rotary clip

Aastra 610d, 620d
Place the supplied fixing bracket on both openings at the upper end of the handset and snap in place by pressing downwards. To remove the fixing bracket, press into the small cutouts at the edge of the bracket and pull the two sides slightly apart.

The **Aastra 610d** and **620d** can also be fitted with a rotary clip as an accessory. Place the supplied fixing bracket on both openings at the upper end of the handset and snap in place by pressing downwards. The clip is then pushed onto the protruding button. To release the handset from the clip, press the top button.
Attaching the carrying strap

Aastra 610d, 620d: There are two openings in the upper part of the fixing bracket. Feed the lower end of the carrying strap through these openings (please install with the fixing bracket removed). Carrying straps are available as accessories (see page 67).

Aastra 630: A carrying strap with carrying strap attachment is available as an accessory. To attach the holder, replace the screwed-on belt clip by the carrying strap attachment.
Headset connection/*Bluetooth*®

All handsets have a 2.5 mm jack plug at the bottom left for connecting a headset. Only use the recommended headsets (see Accessories page 67).

The Aastra 620d/630d mobile handsets have a *Bluetooth* interface (2.0) for corresponding headsets. With a headset only audio data can be transferred via the *Bluetooth* interface.

Safety information

Headsets (earphones and headphones) can produce very loud and high-pitched feedback. Exposure to such feedback can damage hearing. Before using a headset, set the volume as low as possible. For wired headsets, you can adjust the settings in the menu >>> **Audio** > **Volume** > **Headset (wire)**. In the case of Bluetooth headsets, adjust the setting on the device (please consult the User's Guide for the device). If you are making a call with the headset, adjust the volume slowly if necessary.

Aastra 630d - Headset: To remove the sealing cover

The opening of the headset connection is closed with a captive cover. If the headset is not in use, please close the opening so the device can be used in accordance with its protection class.

Remove the sealing cover from the device by pulling it out on the **upper** edge. **Never pull it out on the bottom edge.**

USB and external charging connection

Aastra 620d, 630d: A mini USB connection (2.0) is located at the bottom right. This has two functions:
- as an interface for connecting to a PC to load data from or to the device, for example. If the handset is connected to a PC, the battery is charged at the same time. The charging process is, however, slower than if the handset is charged in the charging unit.
- as a connection socket for a USB charging device (see Accessories, page 67) to charge the handset even when it is in a leather pouch. The charging process is also slower here than charging in the charger cradle.

Only use a shielded USB cable (see Accessories, page 67)

Aastra 630d - USB connector: To remove the sealing cover

The opening of the USB connection in the Aastra 630d is closed with a captive cover. If the USB cable is not in use, please close the opening so the device can be used in accordance with its protection class.

Remove the sealing cover from the device by pulling it out on the **upper** edge. **Never pull it out on the bottom edge.**

Connecting the charging unit

Aastra 610d, 620d: This handset can be used without any changes to the charger cradle.

Aastra 630d: To use this handset, you must remove the two lateral guides in the charger cradle. They are easy to lift on the inside edge using a fingernail or a paper clip.

The plastic guides can also be removed, by pushing a suitable screwdriver into the slits on the bottom of the charger.
Connect the plug-in power supply to the charger cradle and place the connection cable through the cable guide. Place the charger cradle on a non-slip surface. Change the plug of the power supply unit if necessary (see below).

Power supply / Power supply unit

The power supply unit is designed for 100V to 240V AC (50-60 Hz). It is supplied with four change adapters enabling virtually worldwide use. Where necessary, connect the plug normally used in your country to the power supply unit. There are two versions of the plug-in power supply unit that are connected slightly differently:

Version 1: Set the switch on the power supply unit to OPEN and push out the existing plug upwards. Then insert the new plug required into the power supply unit and lock it with the switch (LOCK).

Version 2: Remove any existing plug by pressing OPEN. Then insert the required new plug into the power supply unit at a slight angle with the label TOP upwards. Press downwards until it snaps into place.

Micro SD card

Aastra 620d, 630d: There is a slot for a micro SD card under the battery in the handset. This is not used in the current delivery condition and is available for future applications. Please make sure that the card slot is not damaged when inserting the battery.

Important information about the battery

The devices are powered by a Li-ion battery (both standard and power battery).
It is vital that you read the safety regulations before using the battery for the first time. Keep these safety regulations and all instructions for use at hand for future reference.
- Dispose of used batteries according to the instructions on page 63.
Failure to heed any of the following precautions when using the battery can lead to overheating, fire and danger of explosion.
- CAUTION: Risk of explosion if the battery is replaced by an incorrect type.
- Never try to use the battery for the power supply of any device other than these handsets.
- Never use or leave the battery close to a naked flame.
- Never put the battery into a microwave oven, do not throw it into a fire and do not expose it to high temperatures by any other means.
- Never carry or store the battery together with electrically conducting objects (neck chains, pencil leads, etc.)
- Never attempt to open the battery, never modify it in any way or subject it to severe blows.
- Never immerse the battery in fresh or salt water.
- Never use or leave the battery in direct sunlight, in a vehicle parked in blazing sunlight or in any other location with high temperatures.

- If you ever notice liquid leaking out, unusual odour, build-up of heat, discolouration, deformation or any other abnormal condition when you use, charge or store the battery, remove the battery immediately from the handset and keep it away from naked flames.
- The battery fluid can damage your sight. If at any time battery fluid accidentally gets into your eyes, rinse your eyes immediately with clean tap water and contact a doctor.
- If the battery is to be used by children, make sure a responsible adult instructs the children in the precautions and proper handling, and make sure the children handle the battery correctly.
- If battery fluid accidentally gets onto your clothing or skin, rinse the affected place immediately with pure tap water. Prolonged contact with battery fluid can lead to skin inflammation.

Precautions during use

- The battery is designed for use with these handsets only.
- Only use the charger cradle supplied for charging.
- A new battery is not charged so you need to charge it before using for the first time.
- Using the battery in a cold environment can shorten the expected operating life of a full charge. Charge the battery at a location with a temperature between 10° C and 35° C. Charging outside this temperature range can lead to a longer-than-usual charging time or even to failure of the charging process.
- An extremely short operating time after a full charge indicates that the lifetime of the battery has expired. Replace the battery.
- Never wipe the battery with thinners, benzene, alcohol, or other volatile substances, or chemically treated cloths. These can cause deformation of the battery and malfunction.

Commissioning

Charge the battery before using your handset for the first time.
Maximum battery performance is first reached after three to five charging and discharging cycles.
Place the handset in the charger cradle regularly to achieve optimum battery charge.

After initial charging of the battery your handset is ready for use, calls can be received or made from this handset.

Charging and durations

Charging time in the charger cradle (empty battery):
Full capacity: 2 hours (standard battery), 4 hours (power battery).

Charging time with USB charging device:
Full capacity: 4 hours (standard battery), 8 hours (power battery).

Talk time:
Standard battery - up to 15 hours (when fully charged) for North America.
Standard battery - up to 12 hours (when fully charged) for other countries.
Power battery - up to 30 hours (when fully charged) for North America.
Power battery - up to 24 hours (when fully charged) for other countries.

Standby time:
Standard battery - up to 105 hours (when fully charged) for North America.
Standard battery - up to 110 hours (when fully charged) for other countries.
Power battery - up to 190 hours (when fully charged) for North America.
Power battery - up to 200 hours (when fully charged) for other countries.

Note
Poor radio signals (far away from the system base station) reduce the handset standby and talk times. High loudspeaker or ringer volume, frequent key activation and display illumination as well as active vibration alarm and *Bluetooth* operation are features that can specifically shorten standby and talk times.

Battery: Charging states

The charge status of the battery is indicated on the display. The displays mean:

- Batteries are 81 - 100 % charged
- Batteries are 61 - 80 % charged
- Batteries are 41 - 60 % charged
- Batteries are 21 - 40 % charged
- Batteries are 0 - 20 % charged

- If the handset is placed in the charger cradle when the battery is completely discharged, there is no indication until a specific charge status is reached. This process can take a few minutes and is not a malfunction.
- Even when the handset is switched off, the battery slowly discharges.
- When charging, the LED lights orange; when the battery is fully charged, the LED lights green (can be deactivated in Menu ⟫⟫ **Settings** -> **Illumination** -> **LED indications -> Life indication**).

Battery warning

When the battery capacity is almost exhausted, a warning sign appears on the display and a series of warning beeps sounds (can be deactivated in the Menu ⟫⟫ **Audio** -> **Attention tones**). If you are making a call, you have approximately five minutes' talk time left before the handset switches itself off.

Registering your handset (log-in)

Your handset can be operated on up to 10 different communications systems.
To do so, it must be registered or, more precisely, logged in on each station.
Your system administrator will usually register the handset for operation on the telephone system. The log-in must be enabled for this. Depending on the manufacturer of the system, the enabling can vary. In most cases the IPEI of the handset is needed (found in Menu ⟫⟫ **System** -> **Show IPEI**). To register the handset itself on the communication system, proceed as described in the "System" menu. This requires a PARK number sequence and an access code (AC = Authentication Code) from the system administrator.

Registration

A registration is stored in the device for each communications system on which the handset has been logged in. A registration entry also includes a system name (e.g. A, B, C,..).
If you have logged into the system with your handset, this name appears on the display.

Subscription

After the handset is subscribed in one or more communications systems you can use the telephone to make and receive calls. If the **Auto search** feature (see page 52) is activated, the handset (in idle mode) automatically selects the nearest accessible system and logs in there. If you don't want to use the **automatic search**, you can search exclusively for any desired system using the stored registration entries.

Function overview

Displays, softkeys, LEDs and key functions

Emergency call key (Aastra 630d only)

Earpiece

LEDs

Aastra 610d:
+/- keys (volume adjustment)
Aastra 620d/630d:
3 sidekeys (programmable) and
volume adjustment

Hotkey (programmable)
(not Aastra 610d)

Displays

Rear: Loudspeaker

Navigation keys

3 softkeys (programmable)

Open listening/Hands-free
mode
Call key/consultation call key

Delete key

Cancel key / Power on/off key

Number/letter keys

Headset connection

Ringer on/off

Mini USB connection
(not Aastra 610d)

Key lock

Microphone

Symbols on the upper display line:

- Signal strength
- Microphone switched off
- Battery charge status
- Loudspeaker switched on
- Headset active
- *Bluetooth* headset active
- Voice box message (if available)
- Ringer switched off
- Call key pressed
- Call filter active
- Call diversion activated

Information on the current connection status or lists and text
of the menu are shown on the display. In the idle status you will see

- System name with internal call number
- Your programmed user name
- Current time and date
- Any programmed alarm clock ▶ and/or appointment ◔
- Any activated features
- Symbols for programmed functions

The time is only displayed if it has been transferred from the system or set by you.

The navigation keys are used to scroll upwards or downwards through selection lists (e.g. phone book) and the features menu. A selectable entry is highlighted.

Softkey line and idle display

The three keys below the display are called softkeys. The functions assigned to these keys are shown in the bottom display line. The key function changes automatically according to the operating state of the handset.

When the handset is delivered the following symbols are shown in the softkey line:

⌨↑   Enables selection from the redial list.

↔   Navigation menu. This is used to call up a selection list with frequently used features. These include:
- Phone book in the system (system phone book)
- Handset phone book (personal phone book)
- Information lists (call list, voice box*, redial)
- Profiles

                            * if available

These functions are also assigned to the **navigation keys**.

⨠⨠   You can use them to reach the phone menu .

Note

Please note that the functions of the softkeys are programmable and can have a different assignment later.

LED

The LED (3-colour/red-orange-green) at the upper corner signals specific events that currently cannot be changed as they are required by the system or can be switched on or off by you. Please refer to the following table for more details.

Colour	Status	Description	can be switched on/off
Green	Flashes quickly	Incoming call	Yes
	Flashes slowly	Ready indicator / Within range / Not in the charger cradle	Yes
	Lights	Hands-free operation switched on	Yes
	Lights	Battery fully charged (if in the charger cradle)	Yes [1]
Red	Flashes quickly	Mandown (Aastra 630d only)	No
	Flashes quickly	Outside the system range	No
	Flashes quickly	Alarm call / Message	No
	Flashes slowly	New entries in the info panel (e.g. call list)	Yes
	Flashes slowly	Alarm clock / Appointment	Yes
Orange	Flashes slowly	Ready indicator / Within range / Not in the charger cradle / Battery capacity below 60%	Yes [1]
	Lights	Battery is charging	Yes [1]

[1] coupled to the on/off switch of the ready indicator

Key functions

The following table gives an overview of the various key functions (on delivery).

Key	Duration	. . . in status	Description
Right softkey ⎯	short	Standby	Call up the whole menu
		Menus, Lists	Call up the respective option menu or save
	long	Standby	Programming the key function
Left softkey ⎯	short	Standby	Redial
		Menus, Lists	Confirmation (**Ok**)
		Connection	Option menu during connection
	long	Standby	Programming the key function
Middle softkey ⎯	short	Standby	Display of the "Navigation Menu" (list of the functions that can also be accessed via the navigation keys)
		Menus, Lists, Editor	Cancel (**Esc**)
	long	Standby	Programming the key function
Navigation key Top	short	Standby	Call up the system phone book
		Connection	Increase volume (save with **Ok**)
		Menus, Lists	Scroll up
		Editor	One line up
Navigation key Bottom	short	Standby	Retrieve the personal phone book
		Connection	Reduce volume (save with **Ok**)
		Menus, Lists	Scroll down
		Editor	One line down
Navigation key Left	short	Standby	Retrieve the info list
		Editor	Cursor back one character
	long	Editor	Cursor to start of line
Navigation key Right	short	Standby	Retrieve the profile setting
		Editor	Cursor forward one character
	long	Editor	Cursor to end of line
Hands-free	short	Standby	Set up connection with hands-free operation
		Connection	Switch open listening/hands-free operation on/off
		Lists	Set up hands-free connection to selected entry

| Key	Duration	. . . in status	Description
Key C	short	Incoming call	Switch off the call signal (for current call only)*
		Lists	Delete the corresponding entry
		Editor	Delete the character left of the cursor
	long	Lists	Delete the complete list (except phone book)
		Menus	Return to Standby status
		Editor	Delete all characters
Call key (pick-up), green	short	Standby	Connection set-up
		Connection	R-key function
		Lists	Set up connection to selected entry
	long	Standby	Retrieve the redial list
		Lists	Transfer the entry into predial
End key (hang-up), red	short	Standby	Special Options menu
		Connection	End connection
		Incoming call	Reject call (if supported by system)
		Menus/Lists	Return to Standby status
		Editor	Exit Editor without changes
	long	Every status	Switch off handset
		Handset switched off	Switch on handset
Number keys 0 - 9	short	Standby	Enter number into predial
		Editor	Character according to table (see page 23)
Number 1	long	Standby	Connection to voice box (if available)
Number 2 - 9	long	Standby	Select the corresponding Quick Call destination (if Quick Call programmed)
Key ✱	short	Standby	Enter * in predial
		Editor	To switch between upper and lower case when entering text.
	long	Standby	Switch call signal on/off (permanent)
Key #	short	Standby	Enter # in predial
		Editor	Character according to table (see page 23)
	long	Standby	Key lock on

* Only if supported by the PBX

Key	Duration	. . . in status	Description
Hotkey (not **610d**)	short	Standby	Retrieve the programmed function (VIP list)
	long	Standby	Programming with the desired function
SOS key (**630d** only)	long	All states	Make an emergency call (call or message, depending on the programming and the telephone system)
Top sidekey (**620d**, **630d** only)	short	Standby	Retrieve the programmed function
		Connection	Increase volume (for current connection only)
	long	Standby	Programming with the desired function
Sidekey ⊕ (**610d** only)	short	Connection	Increase volume (for current connection/save with **Ok**)
Middle sidekey (**620d**, **630d** only)	short	Standby	Retrieve the programmed function
	long	Standby	Programming with the desired function
Bottom sidekey (**620d**, **630d** only)	short	Standby	Retrieve the programmed function
		Connection	Reduce volume (for current connection only)
	long	Standby	Programming with the desired function
Sidekey ⊖ (**610d** only)	short	Connection	Reduce volume (for current connection/save with **Ok**)

Navigating in menus

Example: Setting the language

1. Open the menu - depending on the configuration of your handset, press
- the softkey ⟩⟩⟩
or
- briefly press the end key and select the menu item from the list.

2. Use the navigation keys ▲ / ▼ to select the **Settings** entry from the list and press the **Ok** softkey.

3. Use the navigation keys ▲ / ▼ to select the **Display** entry from the list and press the **Ok** softkey.

4. Use the navigation keys ▲ / ▼ to select the **Language** entry from the list and press the **Ok** softkey.

5. Use the navigation keys ▲ / ▼ to select one of the languages offered from the list and press the 💾 softkey (Save).

6. Exit the menu by pressing the **Esc** softkey several times.

Example: Personal phone book/Editor

1. Open the menu - depending on the configuration of your handset, press
- the navigation key ▼
- the softkey ⟩⟩⟩ and select the **Phone book** entry/**Ok** and **Personal directory**/**Ok**.
- one of the function keys to which you have assigned access to the phone book.

2. If the phone book is empty, press the **New** softkey.
If entries already exist, press the ⟩⟩⟩ softkey, select **New entry** and confirm with **Ok**.

3. You will see an overview of the possible entries. Select **Name** and press the **Ok** softkey.

4. Press the key repeatedly to select the character of a key, the character assigned to this key then appears. The entry position automatically moves forward if you make no immediate entry or enter a new character. You can correct entries by moving the cursor to the num-

ber/letter to be deleted with the ◄/► keys and then pressing the **C** key. You can now add new characters at this point.

Every word is automatically started with an upper case letter. Press the * key several times to switch between upper and lower case (**A** or **a** is shown) or only upper case at the start of the word (**Aa** is shown).

5. Now select the next line from ▼ (e.g. **Private**) and press **Ok**.

6. Enter the private call number for the entry and press **Ok**.

7. Select the next line from ▼ (e.g. **Business**) and press **Ok**.

8. Enter the business call number for the entry and press **Ok**.

9. Using this method enter the mobile call number and the e-mail address if required.

10. If you want to assign a Quick Call number key to the entry, select **Quick call** and press **Ok**. Select a key 2...9 from the list and press **Ok**. Exit the list with **Esc**. In the list you can delete or overwrite existing entries.

11. You can assign a special melody to the entry that will signal a call from this call number. Select **Melody** and press **Ok**. Select a melody from the list. Press **Ok** to save your selection.

12. Press the 💾 softkey to save the complete phone book entry.

Editor

Entering names/call numbers

The Editor helps you to enter or change call numbers and names in the lists (e.g. phone book). The maximum length for entering call numbers (numbers) is 32 characters and for entering names (letters) is 16 characters.

For entering letters the following character set can be used:

Key	Upper case	Lower case
1	? ! 1 - + * / = & ( ) % ¿ ¡	? ! 1 - + * / = & ( ) % ¿ ¡
2	A B C 2 Ä Å À Á Ã Æ Ç	a b c 2 ä å à á ã æ ç
3	D E F 3 È É Ê Ë	d e f 3 è é ê ë
4	G H I 4 Í Ì Î Ï Ğ	g h i 4 í ì î ï ğ
5	J K L 5	j k l 5

Basic functions

Switching the handset on/off

Switching the handset off
Press the End key ⌜🔚⌟ and hold it down for a moment

or …

Press the End key ⌜🔚⌟ briefly, select **Switch off** and press **Ok**.
The handset will switch off after a confirmation prompt.

Switching the handset on
To switch on press and hold the End key ⌜🔚⌟ until the display lights again. This can take up to 10 seconds.

Key lock / Phone lock

Switching on the key lock
Press the router key ⌗ and hold for a moment. The key lock is activated and the ⌒ symbol appears in the display.

Switching the key lock off
Press the softkey with the ⌒ symbol and then the router key ⌗ within 3 seconds.

Releasing the phone lock
If you have locked your telephone against unauthorised use (see page 57), you can release the lock again by pressing the 🔒 softkey and entering your PIN.

Switching hands-free operation on/off

Press the ◁ loudspeaker key to switch hands-free operation on or off.
The 🔊 symbol appears on the display if the hands-free operation feature is enabled.
If you make a call using the handset and place it in the charger cradle, the hands-free operation feature is automatically activated.

Acknowledging an appointment/alarm clock

You are notified of an appointment or alarm clock by the specified ringer and the LED flashing red for approx. 45 sec. The display shows the corresponding text. You can acknowledge the signalling with **Esc**.

Adjusting the volume of the earpiece during the call

Aastra 610d
Press the +/- sidekeys to increase/lower the volume of the current call or use the ▲ (louder) and ▼ (quieter) navigation keys.
Aastra 620d/630d
Press the top or bottom sidekeys to increase or lower the volume of the current call or use the ▲ (louder) and ▼ (quieter) navigation keys.

> **Note**
> If you press the **Ok** softkey when adjusting the volume, the new value is saved (i.e. accepted as a menu entry).

Switching the ringer on/off

Switch off: Press the ＊ star key and hold for a moment, the ⚐ symbol appears on the display.

Switch on: Press the ＊ star key again and hold for a moment, the ⚐ symbol will switch off.

Switching ringer off at call

If you want to switch off the ringer for a call that has just come in, press the **C** key. You can still accept the call as long as the caller has not hung up.

Illumination

The keyboard and display are lit. The illumination is activated each time a key is pressed and remains lit for an adjustable time. You can make changes in the Menu ⟩⟩⟩ -> **Settings** -> **Illumination** -> **Keyboard/Display** .

Changing the brightness/contrast of the display

Aastra 610d
Adjust the brightness of the display to your local conditions. Change the contrast in the Menu ⟩⟩⟩ -> **Settings** -> **Display** -> **Contrast** .

Aastra 620d, 630d
Adjust the brightness of the display to your local conditions. Change the brightness in the Menu ⟩⟩⟩ -> **Settings** -> **Display** -> **Brightness**.

Muting the handset

If you do not want your call partner to listen in while you talk to someone in the room for instance, you can temporarily mute your handset.

You are making a call.
Press the ✕ softkey. The ✕ symbol appears on the top line of the display.

Your call partner on the telephone can no longer hear you.
Press the ✎ softkey once more when you want to talk with your call partner again. Your call partner on the telephone can hear you again.

Automatic hide / Info window

If you are in a menu or an entry mask when a call comes in, the information relevant to the call appears on the display (caller name/call number etc.). After completing the call you return to the where you were before the call arrived.
In some settings of the Devices menu information text appears that automatically scrolls if the text is long. You can also scroll manually by pressing the ▲ / ▼ keys.

Event window and "Info"- Menu

In the idle state of the handset an event window will appear, when e.g. new entries are saved in the Caller list, the Voice box* or the Message list*. If there is more than one new entry you will see the topic **New Infos**.

To access the entries you can open the Info-Menu:
Just press in the idle state the Navigation key ◄ and choose one menu item. Alternatively you can also open the Info-Menu by pressing the ⟩⟩⟩ - key or the ⟨⟩ -key.

Vibration alarm (620d, 630d only)

The vibration alarm can be switched on/off in the Menu ⟩⟩⟩ -> **Audio** -> **Ringer settings** -> **Device -> Vibra Call**.

Configuring your personal directory

In the personal directory on the Aastra 610d you can save up to 100 names with up to 3 call numbers each. In the Aastra 620d/630d this is 200 names with 3 call numbers each.
How to create new entries is described in the "Example" section of the Phone Book/Editor from page 21.

_____
* If supported by the system

Editing lists

The following options are available in the redial list and caller list:

Open the respective list, e.g. in the Info menu, with the ◀navigation key.

Press ⟩⟩⟩ to reach the Options menu.

The following options are available

Dial number …
The previously selected entry is immediately called.

Predial
The previously selected entry is transferred to the predial for calling.

Add to...
The call number of the entry is transferred into your personal phone book, the call filter or the VIP list.

Details ...
Further information on the entry is displayed.

Delete
Deletes the entry.

Delete all
Deletes the entire list.

Using the *Bluetooth*® headset (Aastra 620d, 630d)

The *Bluetooth*® word mark and logos are owned by the Bluetooth SIG, Inc. and any use of such marks by [license name] is under license. Other trademarks and trade names are those of their respective owners.

The *Bluetooth* feature of the handsets allows registration of two *Bluetooth* headsets, one of which can be selected for use.
A registered and accessible *Bluetooth* headset (≬ symbol) has priority over any other headset also connected via cable (⌒ symbol).
If the hands-free operation key is pressed when a headset is being used (*Bluetooth* or connected via cable), the call is forwarded to the handset loudspeaker.
If the connection between the handset and *Bluetooth* headset is lost during a call, a message appears on the display. You can decide whether you want to continue the call with a headset connected via cable if necessary, or on the handset itself, or to terminate the call.

Registration

Switch the headset to "Pairing mode". Follow the User's Manual of the headset for this.
Switch on the function in Menu ⟩⟩⟩ -> **Settings** -> **Bluetooth** -> **BT Status** .
Open the Menu ⟩⟩⟩ -> **Settings** -> **Bluetooth** -> **Subscribe headset** and then press the **New** softkey.
The headset that is found is shown by its name on the display. Confirm the display with **Ok** and enter the PIN of the headset. The headset is now logged in and the symbol appears on the top line of the display.

You can specify the active headset in the Menu ⟩⟩⟩ -> **Settings** -> **Bluetooth** -> **Select headset**.

Telephoning via the *Bluetooth* headset

Answering a call:
Press the "Connect key" on the headset. The 🕭 symbol is displayed.

Ending a call:
Press the "End key" on the headset or the End key 📟 on the handset.

Making a call:
Enter the call number on the handset and press the "Connect key" on the headset.

Special key (Hotkey) /VIP list (Aastra 620d, 630d)

On delivery the special key (hotkey) at the top right of the 620d and 630d handsets is prepared as VIP phone book/VIP list for saving up to six telephones to be available very quickly (the key can be reprogrammed).
To program your favourite call numbers briefly press the hotkey followed by the **New** softkey. Enter the name and the call number. You can specify further call numbers under the option **>>>** -> **New Entry**.

To dial these call numbers briefly press the hotkey, select the desired entry and press the call key 📞 : the call will be set up.

VIP list (Aastra 610d)

The programmable keys of the Aastra 610d can also be assigned with a VIP phone book. To do so, program one of these keys as described on page 61 and then save the name and call number as described in the previous section.

Special functions (Aastra 630d only)

SOS

The Aastra 630d handset has an SOS key. When it is pressed the hands-free mode is activated and a previously saved emergency call number is called.
The emergency call number is the same call number that is dialled when "Mandown" is triggered (Aastra 630d) or when a programmed emergency call key is pressed. You can enter the emergency call number in the Menu **>>>** -> **Security**-> **SOS number** .

"Mandown"

The handset can trigger an automatic emergency call. Prerequisite is that you have programmed an emergency call number and the "Mandown" feature is active.
When the "Mandown" feature is activated, an integrated mercury-free position switch constantly determines the angle of tilt of the handset. In most cases the handset is normally worn vertically with the belt clip directly fastened to the person, for example. This position check is made every 5 seconds to check that the device is still in the upright position. If the device is more than 60 degrees from the upright position, an alarm is triggered after a settable time.

The following values can be selected:
Delay
This is the length of time the device can be non-vertical without triggering an alarm.

Prealarm
This is the time for which an alarm – if activated – is signalled on the handset before the emergency call is sent. To disable the alarm tone (i.e. to deactivate the Mandown), press the **Esc** softkey. Changing the handset position will not deactivate the alarm tone.

Alarm tone
The pre-alarm can also be issued without the alarm tone and can be deactivated in the menu.

Auto answer
A call from the programmed emergency call number can be automatically accepted with hands-free operation if this is set in the menu.

Repeat alarm
The time after which a renewed pre-alarm is sent with subsequent emergency call can be defined.

The "Mandown" alarm is only triggered if the device is switched on and in idle mode (i.e. not when scrolling in the menu, for instance).

All settings can be made in Menu 〉〉〉 -> **Security** -> **Sensor Alarm** -> **Mandown**. You can enter the emergency call number in Menu 〉〉〉 -> **Security** -> **SOS number**. The emergency call number is the same call number that is dialled by pressing the SOS key (Aastra 630) or a programmed emergency call key.

Telephoning

Answering a call

| | Press the Call key. |

… or

Reject   Press the **Reject** softkey.*   The call is rejected. The caller hears the busy signal.

✗   The ringer is deactivated, but you can still answer the call.

… or

⠀⠀   Press 〉〉〉 and select from the options that are shown.

- **Accept**
  The call is answered.
- **Reject**
  The call is rejected, the caller hears the busy signal.
- **Add to …**
  The call number of the caller is transferred to the personal phone book, the call filter or the VIP list.

---

* if supported by the system

Making internal / external calls

If you see the message **No record!** when you select a call number, your phone may be blocked from the system. In this instance, inform your system administrator.

Direct dial

⌾ Press the Call key.

▦ ⌗ Dial the internal or external call number with a prefix code? for assigning external lines. Close the entry with the # key (or wait 4 seconds).

… or

⋙ Press ⋙ and select a call number from the following lists
 · Personal phone book
 · Redial
 · Caller list

Predial

▦ ⌾ Enter the call number and press the Call key.

Note

Correcting an entry in Predial
· Briefly press **C** key to delete individual digits;
· Press the **C** key and hold for a moment to delete the entire call number.

Calling from the Redial list

◐↕ In idle mode press the softkey ◐↕. The last 30 dialled subscribers are displayed. The entries are limited to 20 in the Aastra 610d.

▲ ▼ Select an entry with the navigation keys.

⌾ Press the call key, the selected call number will be dialled.

Note

You can also call up the redial feature by pressing the Call key ⌾ and holding for a moment.

Calling from your personal Phone book

▼ In idle mode press the ▼ navigation key .

▦ Enter the first letter(s) of the desired name.

… or

▲ ▼ Select an entry with the navigation keys. You can call up the different call numbers belonging to the name with the ⓘ softkey.

⌾ Press the call key, the selected entry will be called.

Note

You can also call up your personal phone book via the navigation menu (see page 16) or via the ⋙ menu access when the handset is in idle mode.

Calling from the system phone book

▲   In idle mode, press the ▲ navigation key.

▦   Enter the first letter(s) of the desired name and press **Ok**.

… or

▲ ▼   Select an entry with the navigation keys.

📞   Press the call key, the selected entry will be called.

Note

You can also call up the system phone book via the navigation menu (see page 16) or via the ⟩⟩⟩ menu access when the handset is in idle mode.

Calling from the Caller lists

Your handset stores the call numbers of the received and missed calls (depending on the transfer of the call number). 50 entries can be stored (the entries are limited to 30 in the Aastra 610d).

◀   In idle mode press the ◀ navigation key, the Info menu will open.

▲ ▼   Select **Caller list** and then select the name or the call number. The following symbols indicate the respective call type:
       ✔ Received, answered call

       ➡ Missed call

       ⤵ Rejected call

       ⇥ Filtered call

       ↳ Forwarded call

       SOS SOS call

       📞 Call with automatic accept

       You can display further information on the entry with the ⓘ softkey.

📞   Press the call key, the selected entry will be called.

Note

You can also call up the Info menu/call list via the Navigation menu (see page 16) or via the Menu Access ⟩⟩⟩ when the handset is in idle mode.

Ending calls

📞   You can end calls by briefly pressing the End key.

Options during a call

If required you can select a call number from the available lists and dial into an existing connection (DTMF suffix dialling).

⫸   Press ⟩⟩⟩ and select a call number from the following lists
          • Personal phone book
          • Redial
          • Caller list

Answering the phone during a call

If you don't want to be disturbed, you can also completely switch off the call waiting function (see page 53).
You will hear the call waiting tone and see the call in the display.

If call waiting is activated, you will hear the ringing tone and see the call in the display. You can answer the waiting subscriber as follows:

R   Press the R softkey.

or …

📞   Press the Call key.

or …

⫸   Press ⟩⟩⟩ and select **Answer**.

In the case of a second connection, the following options are available to you:

Close current connection

⫸   Press ⟩⟩⟩ and select **Close**.

⫸   Press ⟩⟩⟩ again and select **Retrieve**.

or …

R   Press the R softkey or the call key 📞.

Change between the connections: Brokering

⫸   Press ⟩⟩⟩ again and select **Alternate**.

or …

R   Press the R softkey or the call key 📞.

Forwarding a connection with notification

⫸   Press ⟩⟩⟩ again and select **Connect**.

or …

📞   Press the End key.

Enquiry / Forwarding calls

In the menu (see page 53), you can specify whether you want to receive a reminder for the waiting subscriber while making an enquiry call. If the function is activated, you will hear a short ringing or reminder tone during your call after a set time.

You are making a call.

R   Press the R softkey.

or …

📞   Press the Call key.

or …

⫸   Press ⟩⟩⟩ and select **Alternate**.

        The first connection is on hold.

▦   Enter the call number.

or…

⫸   Press ⟩⟩⟩ and select a call number from the following lists:

• Personal phone book
• Redial
• Caller list

📞 Press the call key to dial the entry.

If the callee does not answer or is busy, press the R softkey or the call key. In the case of a second connection, the following options are available to you:

Close current connection

»» Press »» and select **Close**.

»» Press »» again and select **Retrieve**.

or …

Ⓡ Press the R softkey or the call key 📞 .

Change between the connections: Brokering

»» Press »» and select **Alternate**.

or …

Ⓡ Press the R softkey or the call key 📞 .

Forwarding a connection with notification

»» Press »» again and select **Connect**.

or …

📵 Press the End key.

Forwarding calls without notification

You are in the middle of a phone call and want to forward it to another subscriber without advance notification:

»» Press »» and select **Connect**.

▦ Enter the call number and press **Ok**.
The other phone is called. Your connection is closed.

or …

Ⓡ / 📞 Press the R softkey or the call key.

▦ Enter the call number.
The other phone is called.

📵 Press the End key.

or …

»» Press »» and select **Alternate**.

▦ Enter the call number and press **Ok**.
The other phone is called.

📵 Press the End key.

or...

»» Press »» and select a call number from the following lists:

• Personal phone book
• Redial
• Caller list
The other phone is called.

📵 Press the End key.

If the call is answered, the subscriber which was last called is connected with the waiting subscriber.

Devices menu

You can call up the Devices menu in the following ways:
- In Idle mode, press **>>>** .
- In Idle mode, press ⌷ and select **Menu**.

Notes on the display symbols in the menu

💾 Save	To make settings in the menu, you must open the respective setting window with the **Ok** softkey. Your entry is then saved with the 💾 softkey.
ⓘ Information	You can display further information on the entries with the ⓘ softkey.
⟫ Options	You can open further submenus (e.g. Delete, Edit) with the ⟫ softkey.
Esc / **Back**	You can cancel entries with the **Esc** softkey and/or go one step back in the menu.
📞 Calling	By pressing the 📞 softkey an entry is dialled directly or transferred into pre-dial.

Overview

Info ⓘ

This menu provides access to the call list, redial list and the voice box (if available).
Quick access to this information is also possible on the ◄ navigation key or via the ⟨⟩ key.

Active features

You can quickly reach some important settings, such as **Bluetooth**, **Mandown**, **Call filter**, **Profiles**, **Alarm clock** and **Appointment**, via this menu.

Phone book 📘

Enables access to the private phone book and the system phone book.
This can also be quickly accessed with the ▼ or ▲ navigation key or via the ⟨⟩ key.

Time/Alarms 🔔 🕐

In this menu you can set the date and time, program appointments and alarm clock times and define the formats for the date and time display.

Audio

In this menu you can make settings for the volume, ringer and attention tones.

Call filter

The call filter* allows you to answer or block incoming calls. You can specify the call numbers and the filter status in the menu.

Call diversion

Call diversion enables you to forward calls to other internal / external phones. A call can be forwarded immediately, when the connection is busy or after a certain time.

System

In this menu you can specify the active system for your handset and administer registrations to different systems as well as read the IPEI number and information on the status of hardware and software.

System menu

This menu enables you to set automatic call-back and call waiting functions.

Settings

Device settings, such as key lock, key programming, user name, display settings, illumination, *Bluetooth* etc., are available here.

Protection functions

This menu can be accessed via the PIN (Personal Identification Number). On delivery, it is 0-0-0-0 (4 x zero). Here you can block the handset (lock), change the PIN, program an emergency number, enter settings for the alarm sensor (in 630d only) as well as completely or partially reset the handset to its state on delivery.

---

* if supported by the system

Profiles 👤

This menu is used to create and administrate user profiles. Five modifiable profiles are preset.

"Info" menu ⓘ

Caller list

Shows the entries in the caller list. If a phone book entry is created for a call number, the corresponding name is displayed.

»» -> **Predial**   Call number is transferred to the predial.
Dial number...   Call number will be dialled.
Add to ...   Call number can be transferred into the phone book, the call filter or the VIP list.
Details...   Information on the entry is displayed.
Delete   The entry will be deleted.
Delete all   The list will be deleted after a confirmation prompt.

Voice box

Displays new messages in the voice box of your communications system (if available).

Redial list

Displays the entries in the redial list. If a phone book entry is created for a call number, the corresponding name is displayed.

»» -> **Predial**   Call number is transferred to the predial.
Dial number...   Call number will be dialled.
Add to ...   Call number can be transferred into the phone book, the call filter or the VIP list.
Details...   Information on the entry is displayed.
Delete   The entry will be deleted.
Delete all   The list will be deleted after a confirmation prompt.

"Active features" menu

The "Active features" menu provides quick access to a number of selected menu items.

Bluetooth	Switch on/off and configure the Bluetooth function - not Aastra 610d (see page 56).
Mandown	Switch on/off and configure the Mandown function - Aastra 630d only (see page 58).
Call filter	Access to the filter settings* (see page 50).
Profiles	Quick swapping between the various profiles (see page 59).
Alarm clock	Switch on/off and configure the alarms 1...3. The respective alarm clock is selected with the ◄ and ► keys (see page 47).
Appointment	Switching on/off and configuring the appointments 1...3. The respective appointment is selected with the ◄ and ► keys (see page 46).

"Phone book" menu

The "Phone book" menu provides access to your personal phone book and the system phone book.

Personal directory
Further details for dialling from the phone book and for creating a new entry can be found on pages 35 and 21.

You make changes in the phone book as follows:

Select an entry from the list.

»» -> **Edit**   The entry can be modified.
New entry   Create a new entry.
Add to ...   The following selected call number will be transferred to the call filter or the VIP list.
Delete   The entry will be deleted.
Memory   Shows the number of already stored entries.

* if supported by the system

"Call diversion" menu ↳

Call diversion enables you to forward calls to other internal / external phones. A call can be forwarded immediately, when the connection is busy or after a certain time. If call diversion is activated, the ↳ symbol is shown on the first display line in idle mode.

Off   This is a type of call forwarding. Select one of the available options: "off", "immediately", "busy", "no answer" or "no answer or busy".

No ( )   Select whether you want to enter a destination call number with numerical keys or copy it from one of the phone books: no. from phone book (= personal phone book), main phone book (= system phone book).

0 [sec]   Specify the time delay before the incoming call is forwarded. Select an available time (0 - 32 seconds).

Save!   Press to save the settings. Call diversion is now activated.

Note

Please note that all settings in this menu only take effect when the entries have been confirmed with **Save!**.

"System" menu

Select system

    Auto search

        The handset logs in automatically to the system currently available with the highest signal strength. The handset can only be logged in if it has been registered on the applicable system beforehand. If necessary, please contact your system administrator.

    [Systemname]

        List of systems on which the handset is already registered. The selected system is marked.
Select a system with the navigation keys.
When 💾 is pressed, the handset attempts establish a connection.

Subscriptions

    New system

        Enter the access code and (optionally) the PARK code. Ask your system administrator for information.

    [Systemname]

        You can change the system name and the call number with **Edit**. The change only affects the indication on the idle display. Your actual call number is not changed. You can delete the registration to the respective system with **Delete**.

Show IPEI

The international handset ID is displayed. This may be required for identifying your handset in the telephone system.

Version info

Information concerning the handset hardware and software status is displayed.

"System Menu" menu

CallBk on Hold

    Call-back on hold: You can specify a set time after which you want to be reminded of the connection on hold or if you want to switch off the function.

Call waiting

    Switch the "call waiting" function on and off as required.

"Settings" menu

Key lock

Press **Ok** to activate the key lock (see also page 24).

Key programming

This menu item allows you to program the softkeys (except for Esc), the sidekeys and the hotkeys (not Aastra 610d). After calling up the function press the key that you want to program. A selection list of programmable features appears. It is the same selection that is displayed if the programmable key is pressed and held down in Idle mode. How to proceed is described on page 61 .

User name

You can enter a name here that will be displayed in Idle mode.

Display

Language   Select a display language from the list.

Font settings

(Aastra 620d/630d only) You can select a small, medium or large font for text on the display.

Colour scheme

(Aastra 620d/630d only) You can choose between five different background colours for the selection menus.

Brightness (Aastra 620d/630d only) You can change the brightness of the display to match local lighting conditions.

Contrast   (Aastra 610d only) You can change the contrast of the display to match local lighting conditions.

Illumination

Display dimming

This setting means that the display illumination remains permanently active or dimmed for 30 sec. even when the device is in Idle mode or in the charger cradle. This setting reduces the life of the battery.

Display   Here you can select for how long the full display illumination (each time a key is pressed, for instance) remains active (10 ... 240 s).

Keyboard   Here you can select for how long the keyboard illumination remains active each time a key is pressed (1 ... 240 s).

Charger   Here you can select for how long the display illumination remains active if the device is placed in the charger cradle (off, 1... 240 sec.).

LED indications

You can switch the LED indicators on/off according to requirements (see also page 17).

Life indication	Slowly flashing green or orange LED. Deactivated if the charge indication (orange or green LED) is also deactivated.
Incoming call	Rapidly flashing green or orange LED for incoming call.
Infos	Slowly flashing red LED for a new entry, e.g. in the call list.
Handsfree	Lights green LED when the loudspeaker is activated.
Appointment	Slowly flashing red LED when the appointment is signalled.
Alarm clock	Slowly flashing red LED when the alarm time is signalled.

Device options

Silent charging

The handset does not give an acoustic signal for any calls when it is in the charger cradle. When you take it out, calls are acoustically signalled again. The calls are recorded in the call list.

"Silent Charging" will not apply when the handset is charged via the USB connector (Aastra 620d, 630d).

Auto. key lock

If this option is active, the keyboard is automatically locked after approx. 60 sec if no key is pressed.

Auto. answer (charger)

If this feature is active, the handset automatically answers a call if it is taken out of the charger cradle.

Auto. answer (call)

If this feature is active, the handset automatically answers a call after the first call tone (useful when using a headset - not *Bluetooth* headset).

Note

If you do not use the headset, please deactivate this feature as unnoticed eavesdropping by the caller is possible.

Voice box no.

    The number of your voice box is stored here. This call number is dialled if the 1 key is pressed and held for a moment. If the call number of the voice box is administered by the telephone system, this setting does not appear.

Bluetooth

Status   Shows whether *Bluetooth* is activated or not. Press **Change** to activate or deactivate.

Select headset

    Select the subscribed headset you want to use from the list.

Subscribe headset

    Press **New** to register a new headset for use on your handset. Also carry out the necessary steps on the headset (see User's Manual for the headset).
The handset searches for any *Bluetooth* devices within range for approx. 30 sec. Select an entry, press **Ok** and enter the PIN of the headset. The "pairing" is started.

    If you want to change the name or to delete a *Bluetooth* headset, select ...

≫ ->	**Edit**	Change the name of a headset.
	Delete	The registration data for the respective headset are deleted after a confirmation prompt.

"Security" menu

You need to enter a PIN to open the "Security" menu. On delivery this is set to 0 0 0 0 (4 x zero).

Phone lock

    The phone is locked. Incoming calls only can be accepted. Any programmed emergency call key or SOS key of the Aastra 630d can also be used. To remove the phone lock, see page 24.

Change PIN

    You can change the PIN for the "Security" menu. Enter the new PIN and repeat the entry of the new PIN.

SOS number

    Enter the number to be called in case of emergency. This emergency number is dialled when the SOS key is pressed (Aastra 630d), when a programmed emergency key is pressed or by the Mandown feature (Aastra 630).

Reset to default

    You can reset different areas of your settings to the status they had on delivery.

    Phone book

        You can delete your phone book entries after a confirmation prompt.

    All lists   All lists (call list, redial list, call list) are deleted after a confirmation prompt.

    User settings

        All user settings (e.g. language, display settings) are deleted after a confirmation prompt.

    All   The handset is reset to the status it had on delivery after a confirmation prompt. The registration of the handset on the system and the PIN are not affected by this.

Aastra 630d only:

Descriptions of the "Mandown" feature can be found on page 31.

Alarm sensor

Mandown

Status Shows whether "Mandown" is activated or not. Press the **Change** softkey to activate or deactivate.

Auto answer
You can select whether your telephone automatically answers a call from the selected emergency number in hands-free mode.

Alarm tone You can configure whether or not the pre-alarm should emit an alarm tone.

Delay You can set the time for how long the device can be non-vertical before triggering an alarm (off, 2 sec ... 60 sec).

Prealarm You can set the time that should elapse until the actual emergency call is sent. A call tone increasing in volume (alarm tone) is signalled during this time (if not deactivated). The alarm can still be cancelled during the pre-alarm (off, 5 sec ... 240 sec).

Repeat alarm
If the emergency call is not successful, (e.g. because the line is busy), it is possible to set after which time a repeated pre-alarm is sent with subsequent emergency call (off, 5 sec ... 240 sec).

"Profiles" menu

When the handset is delivered it has four profiles with characteristic settings pre-programmed for the "intended purpose". A fifth profile is available for further settings. You can change all profiles and rename them if required.

Select

No profile No profile can be used with this setting. The settings you select apply.

Normal Parameters for "normal" use are configured in this profile.

Headset Parameters for using a headset are preset in this profile.

Meeting Parameters for using the handset during a meeting are preset in this profile.

Loud Parameters for use in a particularly loud environment are preset in this profile.

<Profile 05>
This profile is available for your own use.

Settings Choose one of the profiles to make changes.

Profil name
Change the name of the profile if required.

Ringer volume
Set your preferred ringer volume (off, rising, 1...7).

Ringer device
Configure where or how the ringer should be signalled (loudspeaker, headset, vibration alarm).

Ringer type Select whether the ringer should ring once or repeatedly.

Key click Switch the key click on or off.

Noise detection
Switch the automatic noise detection for a louder ringer on or off.

Loud environment
Adapt the speech quality in a loud environment.

Silent charging

Switch the "Silent charging" on or off.

LED incoming call

Switch the LED display for an incoming call on or off.

Key programming

Your handset allows you to assign specific keys with frequently used functions.

Aastra 610d
The 3 softkeys below the display can be programmed.

Aastra 620d/630d
The 3 softkeys below the display and the three sidekeys can be programmed. The hotkey (right side-key) can also be assigned.

The symbol/icon of the programmed function is shown on the display (except for hotkey) after programming. A short key press is sufficient to call up the function in Idle mode.

Programming (general)

Press the respective key and hold it for a moment or use the Menu 〉〉〉 -> **Settings** -> **Key programming** (see page 54).
The following selection is offered:

	Default key	Assigns the key with the function it had on delivery.
	No function	The key is not assigned.
	VIP list	The key is assigned with a number list (max. 6 entries).
	Alarm clock	You can program entry to the alarm clock settings.
	Appointment	You can program entry to the appointment settings.
	Profile	The selection of profiles is offered.
	Info	The Info menu (caller list, redial,...) can be programmed.
	Caller list	The caller list is accessed.
	Redial list	The redial list is accessed.
	Voice box	Assigns the key with the selection of the voice box.
	Menu	The key is assigned with the menu access.

Personal directory   Access to the phone book is assigned.

PBX phone book   Access to the system phone book is assigned.

Navigation   Assigns the key with the alternative access to the functions that lie on the navigation keys.

Emergency call   Assigns the key as an emergency call key. The number that was stored in the Menu 〉〉〉 -> **Security** -> **SOS number** is dialled. Only assign the sidekeys or the hotkey with this function.

Call diversion   Assigns the key with access to call diversion.

System menu   Access to the "System menu" (Call-back on hold, call waiting).

Note

If you have reprogrammed the functions from the status they had on delivery, you can access these functions through a number of alternatives.

Redial   … by pressing the Call key 🔲 and holding it for a moment.

Navigation   … by pressing the keys ▲ , ▼ , ▶ , ◀

Menu   … by pressing the End key 🔲 and selection of **Menu**.

Special features for the VIP list (on the hotkey on delivery)

You can only assign the VIP list with numbers if you have programmed the key. After the first call up of the key enter the corresponding number and the name so that the list is available.

Appendix

Care and Maintenance

Your telephone is a product that meets the highest design and manufacturing standards. It should therefore be treated with care. The suggestions listed below will help you enjoy this product for a long time.
Follow all the safety precautions given on page 1. These precautions apply to the handset, the charger cradle and the rechargeable batteries (i.e. the entire telephone) as well as to the accessories.
To clean the telephone, first pull out the adapter plug of the charger cradle from the mains socket.
Wipe the devices first with an antistatic cloth or soft, damp leather rag and then with a dry cloth.
Note: Never spray your telephone with cleaning agents or solvents. Clean the handset and charger cradle contacts with a lint-free cloth.

Environmental Characteristics and Disposal

(applicable for the European Union)

This product is environmentally friendly and can be recycled. It was manufactured in accordance with statutory requirements and with the Manufacturers' Guideline 2002. It was developed with special focus on low energy consumption, long life, and ease of servicing. The few materials used in its manufacture are environmentally friendly. Help to extend the life of your communications device by adhering to the safety instructions, the information on battery lifetime, and the care and maintenance instructions.

Instructions for disposal

To prevent potential consequences to the environment and to health from the disposal of hazardous substances contained in electrical and electronic devices, the directives of the European Parliament and the Council with respect to
- Directive 2002/96/EC "Waste electrical and electronic equipment" and
- Directive 2002/95/EC "Restriction of the use of certain hazardous substances in electrical and electronic equipment"

are nationally and legally regulated in all countries of the EU.
The legislation is aimed primarily at the avoidance of waste from electrical and electronic equipment as well as at the re-utilization of materials, the final recycling and other forms of recycling such waste in order to reduce the amount of waste to be disposed of as well as to decrease the entry of hazardous substances from electrical and electronic equipment into the waste system.

The product you have purchased was developed with a state-of-the-art environmental and recycling orientation and thus complies with the guidelines of the European directives.

The product is marked with the symbol indicated. When disposal is required, this symbol obligates the owner of the product to dispose of this product at a collection point separate from unsorted household waste. Suitable facilities for the return of electrical and electronic waste have been created for this purpose. Obsolete equipment can be brought free of charge to these public reception points for disposal (bring system). Please refer to the information from the responsible offices in the cities and communities for the location of these disposal reception points.

Caution!
Electrical equipment waste does not belong in domestic waste. Bring this type of waste free of charge to the recognised reception points for disposal.

Declaration of Conformity

(applicable for the European Union)

CE mark
This device complies with the requirements of the EU directive:
1999/5/EU directive on radio and telecommunications terminal equipment and the mutual recognition of their conformity. Conformity to the above-mentioned directive is confirmed by the CE mark on the device.

Limited Waranty

(applicable for sales in USA, Canada)

Aastra warrants this product against defects and malfunctions during a one (1) year period from the date of original purchase. If there is a defect or malfunction, Aastra shall, at its option, and as the exclusive remedy, either repair or replace the telephone set at no charge, if returned within the warranty period. If replacement parts are used in making repairs, these parts may be refurbished, or may contain refurbished materials. If it is necessary to replace the telephone set, it may be replaced with a refurbished telephone of the same design and color.
If it should become necessary to repair or replace a defective or malfunctioning telephone set under this warranty, the provisions of this warranty shall apply to the repaired or replaced telephone set until the expiration of ninety (90) days from the date of pick up, or the date of shipment to you, of the repaired or replacement set, or until the end of the original warranty period, whichever is later. Proof of the original purchase date is to be provided with all telephone sets returned for warranty repairs.

Exclusions

Aastra does not warrant its telephone sets to be compatible with the equipment of any particular telephone company. This warranty does not extend to damage to products resulting from improper installation or operation, alteration, accident, neglect, abuse, misuse, fire or natural causes such as storms or floods, after the telephone is in your possession.
Aastra shall not be liable for any incidental or consequential damages, including, but not limited to, loss, damage or expense directly or indirectly arising from the customers use of or inability to use this telephone, either separately or in combination with other equipment. This paragraph, however, shall not apply to consequential damages for injury to the person in the case of telephones used or bought for use primarily for personal, family or household purposes.
This warranty sets forth the entire liability and obligations of Aastra with respect to breach of warranty, and the warranties set forth or limited herein are the sole warranties and are in lieu of all other warranties, expressed or implied, including warranties or fitness for particular purpose and merchantability.

Warranty Repair Services

Should the set fail during the warranty period;
In North America, please call 1-800-574-1611 for further information.
Outside North America, contact your sales representative for return instructions. You will be responsible for shipping charges, if any. When you return this telephone for warranty service, you must present proof of purchase.

After Warranty Service

Aastra offers ongoing repair and support for this product. This service provides repair or replacement of your Aastra product, at Aastra's option, for a fixed charge. You are responsible for all shipping charges. For further information and shipping instructions;
In North America, contact our service information number: 1-800-574-1611.
Outside North America, contact your sales representative.
Note: Repairs to this product may be made only by the manufacturer and its authorized agents, or by others who are legally authorized. This restriction applies during and after the warranty period. Unauthorized repair will void the warranty.

Accessories

You can obtain the following accessories through your dealer:

Accessories

Aastra 610, 620, 630 / Charger with international AC-Adapter

Aastra 610d / Handset

Aastra 620d / Handset

Aastra 610d / Handset

Aastra 620d, 630d / Power-Battery-Pack

Aastra 620d / Cover for Power Battery Compartment

Aastra 630d / Cover for Power Battery Compartment

Aastra 610d, 620d / Rotary-Belt Clip

Neck Band Aastra 610d, 620d, 630d with Neck Band Holder for Aastra 630

Aastra 610d / Leather Pouch

Aastra 620d / Leather Pouch

Aastra 60d / Leather Pouch

Aastra 620d, 630d / Mini USB Service Cable

Headsets

You will find a list of corded headsets and Bluetooth headsets that you can purchase from your dealer on our Internet site. Aastra headsets that comply with the safety requirements of EN60950-1 Item 6.2. are recommended. This does not constitute any appraisal of the acoustic and functional quality of the headsets of the individual manufacturers.

USB charger

If you want to charge your Aastra 610d, 630d handset with a USB charger, please use one of the commercially available USB plug-in power supplies with the following data.
Connection type: Mini USB connector
Type: Switching power supply: 100V to 240 V / 50 – 60 Hz
Output power: approx. 5 W
Output voltage: 5 V/DC
Only use a plug-in power supply unit certified by your authorities.
