

D110P

1 port E1/T1/J1 digital line voice board.
Document Rev0.02

D110P is a high-performance, cost-effective signal span digital voice card. Provide compact and powerful interface to asterisk that can support E1/T1/J1 and PRI interface.

D110P support industry standard protocols, including PRI, Cisco PPP, Frame relay etc. The low profile allow it to fit within a 2U rack-mount case.

Features:

- ◆ 100% hardware compatible with TE110P. Use same device driver without any modify.
- ◆ Industry Standard: PCI 2.2. Both 3.3 volt and 5 volt pci slot can be used.
- ◆ RJ-45 shielded connecter.
- ◆ T1/E1/J1 software configurable.

Important:

For PbFree version of D110P, because the old version of infineon E1(PEB2256 v1.2) chip do not have PbFree package, We have to use the newer version of PEF2256 2.1 or 2.2, thus you must update your wcte11xp driver to make use it. Please download driver from [openvox site](#).

For software and hardware installation, please reference TE110P documents.
