## **1.Introduction**

MV-374/MV-378 is a 4 / 8 channels VoIP GSM Gateway for call termination (VoIP to GSM ) and origination (GSM to VoIP). It is SIP based and compatible with Asterisk. It can enable to make 4 / 8 calls simultaneously from IP phones to GSM networks and GSM network to IP phone.

## **2.Function description**

2.1 VoIP(SIP) 、GSM conversion.

2.2 50 sets of LAN->MOBILE routes setting , 50 sets of MOBILE->LAN routes setting.

2.3 Voice response for setting and status (dial in from mobile).

2.4 Series connections to save bills.

2.5 Standard SIP(RFC2543,RFC3261) protocol ,  
Communicates with other gateway or PC.

## **3.Parts list**

Please check the parts for any missing parts. If do, please contact our agents :

3.1 「 MV-374/MV-378 」 main body

3.2 Power adaptor AC-DC (110V AC – 12V DC) or (220V AC – 12V DC)

3.3 Network cable

3.4 Antenna: MV-374:1 pcs / MV-378: 2 pcs

3.5 Rackmount (compatible with 19“Rack) – option

3.6 User Manual

(3.1) MV-374

(3.1) MV-378

(3.2) MV-374

(3.2) MV-378

(3.3)

(3.4)

(3.5)-option

**4.Dimension : 30x28x4 cm**

---

## 5. Chart of the device

5.1 Antenna : Antenna connector.

5.2 WAN: RJ-45 internet connector , standard RJ-45 socket , connect to HUB.

5.3 DC 12V : Power input.

5.4 SIM Card

5.5 LINK Indicator : Light up when network is connected.

5.6 CH3 : an indicator light of VoIP3

5.7 CH4 : an indicator light of VoIP4

5.8 PWR (Power LED) : Light up when power is normal.

---

## 6. Web Page Setting

When the IP setting is done, the operator may setup all the rest parameters via web page. Browse the IP address from Internet Explorer (e.g. <http://192.168.0.100>) . The following page shows up :

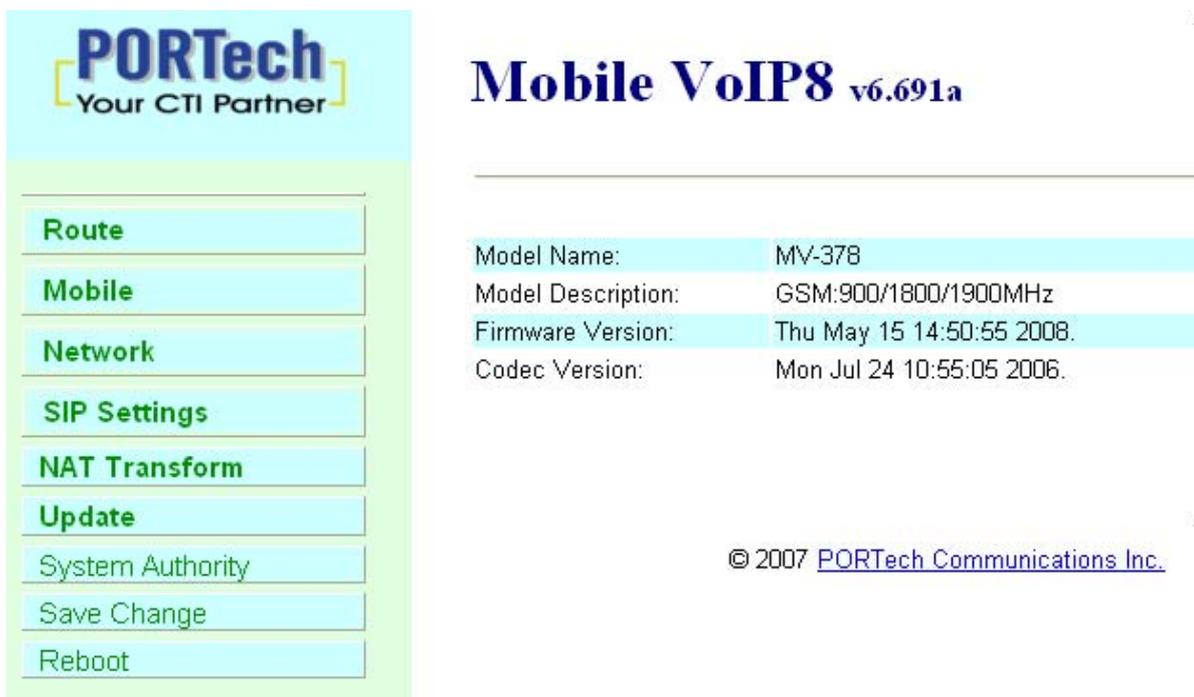

The screenshot shows a web page titled "Login VoIP". The page has a light blue background. At the top, there is a dark blue header with the text "Login VoIP" in white. Below the header, the text "Enter your username and password to login" is displayed, followed by "VoIP server". There are two input fields: "Username" and "Password". Below the input fields are two buttons: "Login" and "Clear".

Enter the username and password for authentication. (default username=voip, password=1234). The page follows when the username and password are correct.

---

## 7. System Information.

- 7.1 When you login the web page, you can see the demo system current system information like firmware version, company... etc in this page.
- 7.2 Also you can see the function lists in the left side. You can use mouse to click the function you want to set up.

### Mobile VoIP8 v6.691a

Model Name:	MV-378
Model Description:	GSM:900/1800/1900MHz
Firmware Version:	Thu May 15 14:50:55 2008.
Codec Version:	Mon Jul 24 10:55:05 2006.

© 2007 [PORTech Communications Inc.](#)

## 8. Route

### **Important:**

The route table -50 sets can share by two channels(1,2 ch / 3,4 ch / 5,6 ch / 7,8 ch ) . The setting, please refer 9.2 Mobile setting  
ex: Mobile 1 use the route table for item 0-24,  
Mobile 2 use the route table for item 25-49

## 8.1 Mobile TO LAN Settings

The operator may assign 50 sets of routing rule to transfer the call incoming from MOBILE to LAN.

The screenshot shows the PORTech web interface for configuring Mobile To LAN settings. The left sidebar contains navigation options: Route, Mobile, Network, SIP Settings, NAT Transform, Update, System Authority, Save Change, and Reboot. The main content area is titled 'Mobile To LAN Table' and includes a dropdown menu for 'Mobile 1, 2', a 'Page: 1' dropdown, and a table with columns for Item, CID, URL, and Select. Below the table are buttons for 'Delete Selected', 'Delete All', and 'reset'. An 'Add New' section contains input fields for Position (0-49), CID (with example 0911111111), and URL (with example 192.168.0.1, \*2St), along with 'Add' and 'reset' buttons.

Item	CID	URL	Select
0	*	*	<input type="checkbox"/>
1			<input type="checkbox"/>
2			<input type="checkbox"/>
3			<input type="checkbox"/>
4			<input type="checkbox"/>
5			<input type="checkbox"/>
6			<input type="checkbox"/>
7			<input type="checkbox"/>
8			<input type="checkbox"/>
9			<input type="checkbox"/>

The MV-374/MV-378 will transfer to the URL according to the caller ID of the Mobile.

\*CID :

- (1) may enter the whole number, e.g. 0911111111
- (2) only part of the number (prefix) e.g. 0911\* means any number starting with 0911 will be accepted
- (3) \* means all numbers can be accepted

---

(4) N means the calls without the CID

Please note the priority of the rules. The item which has more digits will have higher priority. If the digits are the same, then former one gets the higher priority.

\*URL : The IP address to transfer this call

(1) may enter the whole IP address, e.g. 192.168.0.101 or proxy extension or phone number.

(2) If this field is blank or simply 'N', it means refuse to transfer.

(3) If an '\*' entered, it means 2-stages-dialing. The call will be answered and prompt dial tone again to receive the IP address/sip extension or **any phone number** as the destination. The caller may enter the IP such as 192\*168\*0\*101#.

\*If the device have register proxy server/Asterisk ,you can enter any destination phone number. Please note the proxy server/Asterisk need to set the route of destination phone number.

Example:

(1) Mobile to Lan: 0932\*,0911123456

MV-374/MV-378 have register proxy server/Asterisk

The proxy server/Asterisk have the route "09"

When the caller's prefix number is 0932,MV-374/MV-378 will connect 0911123456 automaticlly

(2) Mobile to Lan: \*,\*

Any caller call the MV-374/MV-378's sim,MV-374/MV-378 will prompt dial tone.Caller can enter IP or sip extension or phone number.

\*sip extension or phone number both need to register SIP Proxy Server or Asterisk.

\*Phone number, SIP Proxy Server or Asterisk need to set the route of this phone number.

## 8.2 Mobile to LAN Speed Dial Settings

When you set Mobile to LAN Speed Dial Settings and Mobile to LAN at the same time, MV-374/MV-378 will give priority to Mobile to LAN Speed Dial Settings.

**PORTech**  
Your CTI Partner

### Mobile To LAN Speed Dial

Mobile 1, 2

Item	Name	URL	Select
0			<input type="checkbox"/>
1			<input type="checkbox"/>
2			<input type="checkbox"/>
3			<input type="checkbox"/>
4			<input type="checkbox"/>
5			<input type="checkbox"/>
6			<input type="checkbox"/>
7			<input type="checkbox"/>
8			<input type="checkbox"/>
9			<input type="checkbox"/>

Delete Selected Delete All Reset

**Add New Phone**

Position:  (0~9)  
Name:   
URL:

Add Reset

\*The call will be answered and prompt dial tone again. When the caller may enter the “Num”, system will connect the “URL” as destination.

E.g Num:0 Name:test URL:192.168.0.107

When the caller hear dial tone and enter 0, system will connect 192.168.0.107

### 8.3 LAN to Mobile Settings

The operator may assign 50 sets of routing rule to transfer the call incoming from LAN to MOBILE.

**PORTech**  
Your CTI Partner

## LAN To Mobile Table

Mobile 1, 2

Page: 1

Item	URL	Call Num	Select
0	*	*	<input type="checkbox"/>
1			<input type="checkbox"/>
2			<input type="checkbox"/>
3			<input type="checkbox"/>
4			<input type="checkbox"/>
5			<input type="checkbox"/>
6			<input type="checkbox"/>
7			<input type="checkbox"/>
8			<input type="checkbox"/>
9			<input type="checkbox"/>

Delete Selected Delete All Reset

**Add New**

Position:  (0~49)

URL:  Ex:192.168.0.1, 192.168.0.\*

Call Num:  Ex:0911, \*2St, #, #d?, #d?A??:1St

Add Reset

The MV-374/MV-378 will transfer to the mobile number according to the incoming URL

\*URL : The IP address of the incoming call.

may enter the whole IP address, e.g. 192.168.0.101 or proxy server's extension. If a simple "\*" is entered, means no restriction for the incoming IP address.

---

\*Call Num :

- 1.may enter the whole number, e.g. 0911111111
- 2.a simple "\*"means 2-stages-dialing. The call will be answered and prompt dial tone again to receive the called number as the destination, e.g. 0911111111 or 0911111111#
- 3.#['d'n']['a'ppp] for one-stage dialing  
[...] is option  
'd'n means to delete the beginning n codes,  
'a'ppp means to add 'ppp' in front.  
for example #d2a09 means one-stage dialing,  
delete the first 2 codes from your destination number,  
then add 09 in front as the new destination number.

**Example:**

Lan to Mobile: \*, #

- (1)MV-374/MV-378 and Lan Phone both need to register proxy server or Asterisk.
- (2)Proxy server/asterisk set the route that the prefix of destination number
- (3)When you dial any destination phone number from lan phone,MV-374/MV-378 will connect this call auto.

**Example of Application:**

When you call the ch.1 MV-374/MV-378 gsm number,it will provide dial tone and you enter a destination number.

Then ch.2 MV-374/MV-378 will dial this number and connect.

ch.1 MV-374/MV-378: mobile to lan set route table \*,\*

ch.2 MV-374/MV-378:lan to mobile set route table \*,#

Additionally, two channels MV-374/MV-378 both need to register proxy server or Asterisk.

And proxy server/asterisk set the route that the prefix of destination number dial out from ch.2 MV-374/MV-378.

---

---

**MV-374/MV-378's IP:**

**The channel 1:192.168.0.100:5060**

**The channel 2:192.168.0.100:5062**

**The channel 3:192.168.0.102:5060**

**The channel 4:192.168.0.102:5062**

**The channel 5:192.168.0.104:5060**

**The channel 6:192.168.0.104:5062**

**The channel 7:192.168.0.106:5060**

**The channel 8:192.168.0.106:5062**

## Forward Setting

Mobile 1, 2 ▾

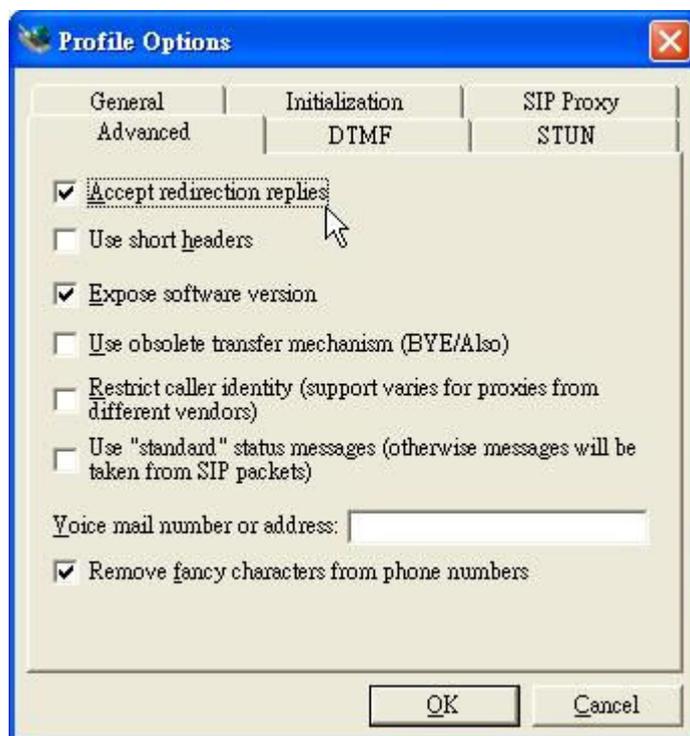

Forward Enable

	Name	URL:Port
Fwd to Mobile1:	<input type="text"/>	<input type="text"/>
Fwd to Mobile2:	<input type="text"/>	<input type="text"/>
Fwd to External:	<input type="text"/>	<input type="text"/>

submit

cancel

- \* "Forward Enable" is not motivate on Default value.  
So please, mark "Forward Enable" this blank to motivate this function.  
Take SJ Phone for example: Profiles -> Edit -> Advanced -> Accept redirection replies (Turn on the "Forward Enable", therefore the SJ Phone can designate a port which are free to use.)

	Name	URL:Port
Fwd to Mobile1:		192.168.0.100:5060
Fwd to Mobile2:		192.168.0.100:5062
Fwd to External:		

#### The Explanation of Picture:

Fwd to Mobile1:192.168.0.100 : 5060, it means when 5062 Port are busying, SJ Phone can transfer the call to 5060 Port (192.168.0.100).

Fwd to Mobile2:192.168.0.100 : 5062, it means when 5060 Port are busying, SJ Phone can transfer the call to 5062 Port (192.168.0.100).

- If both 5060 port and 5062 port are busying at same time, you can set up "Fwd to External", then you can transfer the phone call to another designate device.

## 11.SIP Setting

In SIP Setting you can setup the Service Domain,Port Settings,Codec Settings,RTP setting,RPort Setting and Other Settings. If the VoIP service is provided by ISP,you need to setup the related informations correctly then you can register to SIP Proxy Server correctly.

11.1 In Servcie Domain Function you need to input the account and the related informations in this page, please refer to your ISP Provider. You can register three SIP accounts . You can dial the VoIP phone to your friends via first enable SIP account and receive the phone from the tree SIP account.

**PORTech**

## Ports Setting

You could set the port number in this page.

Port of Mobile 1		
SIP Port:	<input type="text" value="5060"/>	(1024~65535)
RTP Port:	<input type="text" value="60000"/>	(1024~65535)

Port of Mobile N		
SIP Port:	<input type="text" value="5062"/>	(1024~65535)
RTP Port:	<input type="text" value="60100"/>	(1024~65535)

### 11.3 Codec Settings:

You can setup the Codec priority, RTP packet length in this page. You need to follow the ISP suggestion to setup these items. When you finished the setting, please click the Submit button.

## Codec Settings

Codec Priority	
Codec Priority 1:	G.711 u-law
Codec Priority 2:	G.711 a-law
Codec Priority 3:	G.723
Codec Priority 4:	G.729
Codec Priority 5:	G.726 - 16
Codec Priority 6:	G.726 - 24
Codec Priority 7:	G.726 - 32
Codec Priority 8:	G.726 - 40

RTP Packet Length	
G.711 & G.729:	20 ms
G.723:	30 ms

G.723 5.3K	
G.723 5.3K:	<input type="radio"/> On <input checked="" type="radio"/> Off

Voice VAD	
Voice VAD:	<input type="radio"/> On <input checked="" type="radio"/> Off

## 11.4 Codec ID Setting

You can setup the Codec ID in this page.

### Codec ID Setting

You could set the value of Codec ID in this page.

Codec Type	ID	Default Value
G726-16 ID:	<input type="text" value="23"/> (95~255)	<input checked="" type="checkbox"/> 23
G726-24 ID:	<input type="text" value="22"/> (95~255)	<input checked="" type="checkbox"/> 22
G726-32 ID:	<input type="text" value="2"/> (95~255)	<input checked="" type="checkbox"/> 2
G726-40 ID:	<input type="text" value="21"/> (95~255)	<input checked="" type="checkbox"/> 21
RFC 2833 ID:	<input type="text" value="101"/> (95~255)	<input checked="" type="checkbox"/> 101

### SIP Responses Setting

Response on port busy.	
<input checked="" type="radio"/> 486	Busy here
<input type="radio"/> 503	Service unavailable

SIP Responses	
<input checked="" type="radio"/> ON <input type="radio"/> OFF	180 Ringing ( Auto force to ON, if 183 was OFF. )
<input type="radio"/> ON <input checked="" type="radio"/> OFF	183 Session Progress

11.7.1 486(busy here), 503(Service unavailable): When Device are busying, you can select 486 or 505 to response to SIP.

11.7.2 180 Ring on/off: LAN TO MOBILE two stage dialing can be turn off, therefore there will be no the Ring Back Tone, all the phone call will be transferred to Voice-Mail directly. (For this function, 183 must be turn on)

---

11.7.3 183(Session Progress)-->[It means "on progressing"]: When you turn 183 on, it means you can hear voicemail while GSM side are busy. We recommend you to turn this on if you use SIP Proxy.

### 11.8 Other Settings

Other Settings: you can setup the Hold by RFC and QoS in this page. To change these settings. please following your ISP information. When you finished the setting, please click the Submit button. The QoS setting is to set the voice packets' priority. If you set the value higher than 0, then the voice packets will get the higher priority to the Internet. But the QoS function still need to cooperate with the others Internet devices.

## 14.Update

In Update you can update the system's firmware to the new one or do the factory reset to let the system back to default setting.

### 14.1 Update firmware

**PORTech**  
Your CTI Partner

## Update Firmware

You could update the newest firmware. PCB mark: 2N149A

**Method:**  HTTP  TFTP

**HTTP**

Code Type: Risc

File Location:  浏览...

**TFTP**

TFTP Server: 192.168.1.250

Update Reset

- (1) In New Firmware function you can update new firmware via HTTP in this page. You can upgrade the firmware by the following steps:
- (2) Select the firmware code type, Risc code.
- (3) Click the "Browse" button in the right side of the File Location or you can type the correct path and the filename in File Location blank.
- (4) Select the correct file you want to download to the system then click the Update button.
- (5) Please click update/default setting after update firmware

---

## 14.2 Restore Default Settings

In this page: Update/ Default Settings, you could restore the factory default settings to the system. **All setting will restore default setting. IP will retain original IP as usual not default IP.**

### Restore Default Settings

You could click the restore button to restore the factory settings.

Restore default settings:

---

## 15. Save Change

In Save Change you can save the changes you have done. If you want to use new setting in the VoIP system, You have to click the Save button. After you click the Save button, the system will automatically restart and the new setting will effect.

**PORTech**  
Your CTI Partner

Reboot

### Save Changes

You have to save changes to effect them.

Save Changes:

---

## 16.Reboot

Reboot function you can restart the system. If you want to restart the system, you can just click the Reboor button, then the system will automatically.

### Reboot System

You could press the reboot button to restart the system.

---

Reboot system:

---

---

## 17. IP Setting

The operator can setup or query the network parameters by dialing in the mobile number which it SIM card has been put in the main body. The status or result is response by voice. In the first 20 seconds after power-on, the VoIP GSM Gateway enters the IP setting mode. The operator may dial in the mobile number during this period to set or query the network parameters.

Item	IVR Action	IVR Menu Choice	Notes
1	Reboot	#195#	After you hear "Option Successful," hang-up. Unit will reboot automatically.
2	Factory Reset	#198#	System will automatically Reboot.WARNING: ALL User-Changeable" NONDEFAULT SETTINGS WILL BE LOST! This will include network and service provider data.
3	Check IP Address	#120#	IVR will announce the current IP address , Default : 192.168.0.100
4	Check IP Type	#121#	IVR will announce if DHCP is enabled or disabled. default : OFF
5	Check Network Mask	#123#	IVR will announce the current network mask.Default : 255.255.255.0
6	Check Gateway IP Address	#124#	IVR will announce the current gateway IP address, Default : 192.168.0.254
7	Check Primary	#125#	IVR will announce the current

	DNS Server		setting in the Primary DNS field. Default : 192.168.0.1
8	Check Firmware Version	#128#	IVR will announce the version of the firmware running
9	Set as DHCP client	#111#	The system will change to DHCP Client type
10	Set Static IP Address	#112xxx*xxx*xxx*xxx#	DHCP will be disabled and system will change to the Static IP type. Enter IP address using numbers on the telephone key pad. Use the * (star) key when entering a decimal point.
11	Set Network Mask	#113xxx*xxx*xxx*xxx#	Must set Static IP first. Enter value using numbers on the telephone key pad. Use the * (star) key when entering a decimal point.
12	Set Gateway IP Address	#114xxx*xxx*xxx*xxx#	Must set Static IP first. Enter IP address using numbers on the telephone key pad. Use the * (star) key when entering a decimal point.
13	Set Primary DNS Server	#115xxx*xxx*xxx*xxx#	Must set Static IP first. Enter IP address using numbers on the telephone key pad. Use the * (star) key when entering a decimal point.

#### 18.5 GSM (MV-374/MV-378)

Dual BAND: 900/1800 MHZ

Tri BAND(BenQ M23): 900/1800/1900 MHZ

Tri BAND(Siemens MC56): 850/1800/1900 MHZ

Quad BAND: 900/1800/1900/850 MHZ

## 19. Appendix: Setup MV-374/MV-378 with Asterisk

### 19.1 Usage

A typical usage of such a gateway is to be able to give a call with your normal mobile to any destination at voip cost :

Your mobile <----*gsm network*----> MV-374/MV-378 <--*lan*--> Asterisk  
<--*internet*--> VOIP provider <--*whatever*--> landline

To do such a call, you just call your MV-374/MV-378 number (it has its own simcard), then you get an invitation tone, then you dial the number which is handled by Asterisk.

If you have some special deals with your mobile operator, like free special number, you can call your MV-374/MV-378 for free.

You can then call all around the world from your mobile at voip cost :-)

### 19.2 MV-374/MV-378 Configuration

Once you've configured everything in the box, one good advice is to unplug the power and to restart it. By this way you should have all the parameters taken into account.

To have the MV-374/MV-378 to work with Asterisk, you need first to

---

configure the box.

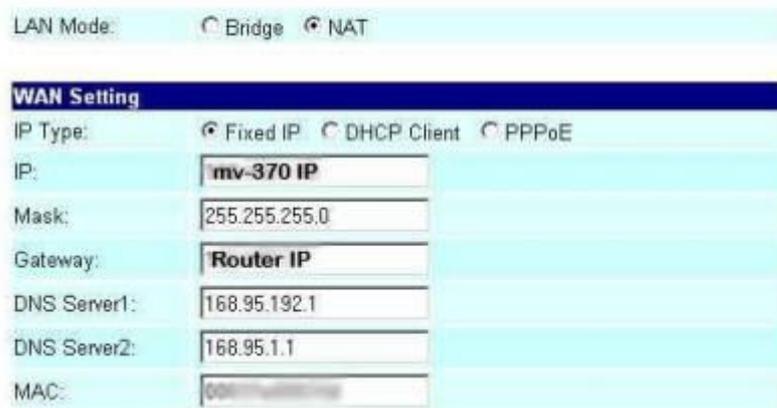

Here are some screen shots showing all the important parameters.

You have to note that in all the configuration process, the MV-374/MV-378 is considered as extension '103' of the IPBX.

In **Bold** are the parameters depending on your installation

## LAN Settings

You could configure the LAN settings in this page..

The screenshot shows a configuration page for LAN settings. At the top, there is a section for 'LAN Mode' with two radio buttons: 'Bridge' (unselected) and 'NAT' (selected). Below this is a section titled 'WAN Setting' with a dark blue header. Under the header, there are several fields: 'IP Type' with radio buttons for 'Fixed IP' (selected), 'DHCP Client', and 'PPPoE'; 'IP:' with a text box containing 'mv-370 IP'; 'Mask:' with a text box containing '255.255.255.0'; 'Gateway:' with a text box containing 'Router IP'; 'DNS Server1:' with a text box containing '168.95.192.1'; 'DNS Server2:' with a text box containing '168.95.1.1'; and 'MAC:' with a text box containing '00:00:00:00:00:00'. The text boxes for IP, Mask, Gateway, DNS Server1, and DNS Server2 are highlighted in light blue.

---

## LAN To Mobile Table

i@

Page: 1

Item	URL	Call Num	Select
0	your asterisk IP	#	<input type="checkbox"/>
1			<input type="checkbox"/>
2			<input type="checkbox"/>
3			<input type="checkbox"/>
4			<input type="checkbox"/>
5			<input type="checkbox"/>
6			<input type="checkbox"/>
7			<input type="checkbox"/>
8			<input type="checkbox"/>
9			<input type="checkbox"/>

Here the '#' is important to avoid the two stage dialing when you give a call from Asterisk to GSM.

---

## Mobile To LAN Table

i@

Page: 1

Item	CID	URL	Select
0	authorised mobile n°	103	<input type="checkbox"/>
1	another authorised n°	103	<input type="checkbox"/>
2			<input type="checkbox"/>
3			<input type="checkbox"/>
4			<input type="checkbox"/>
5			<input type="checkbox"/>
6			<input type="checkbox"/>
7			<input type="checkbox"/>
8			<input type="checkbox"/>
9			<input type="checkbox"/>

The mobile number you give in that page are the authorised mobile which can call GSM to Asterisk.

---

These mobile number must be defined as your GSM provider displays the number.

If you don't know how it is displayed, just give a call to the box and check the number given in the 'Incoming Mob' field of the 'Mobile Status' page. Any number which is not in that list won't have acces to the LAN side, so to Asterisk.

If you want to allow any number, just set '\*' in that field ... but beware of the bill ;-)

## Service Domain Settings

You could set information of service domains in this page.

Realm 1 (Default)	
Active:	<input checked="" type="radio"/> On <input type="radio"/> Off
Display Name:	<input type="text" value="103"/>
User Name:	<input type="text" value="103"/>
Register Name:	<input type="text" value="103"/>
Register Password:	<input type="text" value="Asterisk extension password"/>
Domain Server:	<input type="text"/>
Proxy Server:	<input type="text" value="Asterisk IP"/>
Outbound Proxy:	<input type="text"/>
Status:	Registered

Once Asterisk configuration is made, you should get 'Registered' on the Realm1.

---

## Codec Settings

You could set the codec settings in this page.

Codec Priority	
Codec Priority 1:	<input type="text" value="G.711 u-law"/>
Codec Priority 2:	<input type="text" value="G.711 a-law"/>
Codec Priority 3:	<input type="text" value="Not Used"/>
Codec Priority 4:	<input type="text" value="Not Used"/>
Codec Priority 5:	<input type="text" value="Not Used"/>
Codec Priority 6:	<input type="text" value="Not Used"/>
Codec Priority 7:	<input type="text" value="Not Used"/>
Codec Priority 8:	<input type="text" value="Not Used"/>

RTP Packet Length	
G.711 & G.729:	<input type="text" value="20 ms"/>
G.723:	<input type="text" value="30 ms"/>

G.723 5.3K	
G.723 5.3K:	<input type="radio"/> On <input checked="" type="radio"/> Off

Voice VAD	
Voice VAD:	<input type="radio"/> On <input checked="" type="radio"/> Off

It is very important to use only u-law or a-law as all DTMF is inband. So if you want to be able to do some DISA when you call from GSM to Asterisk, it has to be one of these 2 codecs.

## Mobile Setting

You could set the volume of your phone in this page.

@			
VoIP Volume:	<input type="text" value="10"/> (0-12)	VoIP Gain:	<input type="text" value="12"/> (0-15)
@			
LAN DTMF Gain:	<input type="text" value="10"/> (0-12)	Mobile In Gain:	<input type="text" value="3"/> (0-4)
@			
Caller ID	<input type="radio"/> Clid	<input checked="" type="radio"/> Fix (SIP User)	
@			
Mobile PIN Code:	On <input type="checkbox"/>	Code: <input type="text"/>	Confirmed: <input type="text"/>

These settings seem to be ok, just adjust ...

---

### 19.3 Antenna position

Another important thing is to properly place the provided antenna.

If your gsm reception is good, you should get around 18 or 19 as Signal Quality in the "Mobile Status" page.

With that level of signal quality, your audio quality will be very good.

On the other end, the signal quality down to 11, audio becomes very jerky.

So, maximum signal quality = maximum audio quality.

### 19.4 Asterisk configuration

Once the MV-374/MV-378 is set, you have to configure Asterisk.

On that side, you have to setup files as follow :

#### **19.5 sip.conf**

; GSM VOIP Gateway MV-374/MV-378

[103]

type=friend

username=103

fromuser=103

regexten=103 ; When they register, create extension 401

secret=xxxxxxx ; Asterisk extension password

context=gateway ; Incoming calls context

dtmfmode=inband ; Very important for DISA to work

call-limit=1 ; Limit to 1 call max

callerid=GSM Gateway <103>

host=dynamic

nat=no ; Gateway is not behind a NAT router

canreinvite=no ; Typically set to NO if behind NAT

insecure=very

qualify=yes

disallow=all

allow=ulaw ; preferred codec for DTMF detection

allow=alaw

#### **19.6 extensions.conf**

---

; \*\*\*\*\* GSM Gateway incoming calls \*\*\*\*\*

[gateway]

exten => \_103,1,Answer()

exten => \_103,2,DigitTimeout(3) ; give enough time to do second stage dialing

exten => \_103,3,ResponseTimeout(5)

exten => \_103,4,DISA(no-password|outgoing) ; here 'outgoing' is the normal context to deal with the dial plan

[outgoing]

...

; example of LAN to GSM call

; call the MV-374/MV-378 sim card mail box thru GSM

exten => \_888,1,SetCallerID("xxxxxxxxxx")

exten => \_888,2,Dial(SIP/\${EXTEN}@103,60,r)

exten => \_888,3,Hangup()

---

## 20.How to setup Asterisk to receive Caller ID from

### MV-374/MV-378

#### Test version

trixbox-2.2

#### SIP Softphone

- SJPhone 1.60.289a
- X-Lite 1105x

#### Modify file

- Add the following setting to/etc/asterisk/sip.conf

[1000]

type=friend

secret=1000

qualify=yes

nat=yes

host=dynamic

canreinvite=no

context=internal

[1001]

type=friend

secret=1001

qualify=yes

nat=yes

host=dynamic

canreinvite=no

context=internal

[1002]

type=friend

---

secret=1002  
qualify=yes  
nat=yes  
host=dynamic  
canreinvite=no  
context=internal

- Add the following setting to /etc/asterisk/extensions.conf

```
[internal]
exten => 1000,1,Dial(SIP/1000)
exten => 1001,1,Dial(SIP/1001)
exten => 1002,1,Dial(SIP/1002)
```

configure:

```
trixbox-2.2: address=192.168.66.202:5060
SJPhone: address=192.168.66.145:5060; username=1000,
displayname=user_1000
X-Lite: address=192.168.66.145:7331; username=1001, displayname=user_1001
MV-374/MV-378: address=192.168.66.203:5060; username=1002,
displayname=user_1002
```

**test1**

pstn → call 0928492911(mobile number) → MV-374/MV-378 → hear the second dial tone, call SoftPhone's number → SoftPhone → show pstn caller id

This is X-Lite receiving packet, red word is pstn number. Test ok.

```
INVITE sip:1001@192.168.66.145:7331 SIP/2.0
Via: SIP/2.0/UDP 192.168.66.202:5060;branch=z9hG4bK3d0bbaf7;rport
```

test 2

SoftPhone → call 1002 → MV-374/MV-378 → hear second dial tone and call pstn →  
pstn answer → show caller id-mobile number 0928492911

This Is X-Lite receiving packet. Test ok.

## 21. Simple Steps

Step 1. Change the Network setting if you need (Network/network setting)

Step 2. Register SIP proxy Server or Asterisk or VoipBuster if you need  
(sip setting/service domain)

Step 3. Set Route ( **request** )

mobile to lan:	
(1)	*,* --->it is two stage dialing.
	when mobile call in,MV-374/MV-378 will provide dial tone and you can enter ip or asterisk extension or phone number.
*	If you want to enter phone number,please note your asterisk need to have route of destination number.
(2)	*, specific extension or IP or phone number
	when mobile call in,MV-374/MV-378 will connect with this specific extension or IP or phone number auto
*	If you want to set specific phone number,please note your asterisk need to have route of destination number.
Lan to Mobile:	
(1)	*,* --->it is two stage dialing.
	when lan phone call in,MV-374/MV-378 will provide dial tone and you can enter mobile number.
(2)	*, specific mobile number
	when lan phone call in,MV-374/MV-378 will connect with the specific mobile number auto.
(3)	*,#--->It is 1 stage dialing
	When lan phone and MV-374/MV-378 both register Asterisk, you can dial any destination number from lan phone directly.
*	Please note:Asterisk need to set route of destination number that dial out from MV-374/MV-378

\* All changes both need to click "save and change"
