This is an ideal product replacing the traditional home intercom (door phone, entry system) that will provide you with more options. 2N® Helios home intercom? The 2N® Helios home intercom (door phone, entry system) allows you to speak with visitors standing at your company entrance and open the door for them from your desk using a standard phone. What is 2N® home intercom? The 2ENTRY Helios home intercom (door phone, entry system) is a flexible modular system, which facilitates the creation of customized solutions. You can design and build home intercoms of various sizes and containing various controlling items to exactly suit your needs. One-touch illuminated buttons for simple and fast calling can be complemented with a numerical keypad for door opening and dialing of selected numbers. How does 2N® home intercom work? Thanks to the integrated switch, you can open the door while talking with the visitor over the phone by simply pressing the right combination of keys on your phone. Since the code is detected directly in the 2N® Helios home intercom (door phone, entry system), it is impossible to open the door accidentally. 2N® Helios home intercom (door phone, entry system) target users are house owners and small, medium and large companies that want to solve the matter of security for their property. 2N® home intercom and its unique design The unique design of the 2N® Helios home intercom (door phone, entry system) will nicely decorate your entrance and the top class technology gives you the opportunity not only to know who is waiting in front of your house even while you are on holiday but also to control access. Use of the 2N® Helios home intercom (door phone, entry system) at your office does not require any special installation or wiring. It is simply connected to the traditional phone system or to an IP based network. The 2N® Helios home intercom (door phone) is also the first multi-functional, multi-user GSM cellular door phone to meet the criteria the security industry has been asking for!
