ADSL2/2+ Router with 1 Serial Port & 4 Ethernet Ports Sarian's 6000 Series is based on the very latest ADSL2/2+ platform, supporting the fastest broadband speeds available. ADSL2 offers considerable performance benefits over standard ADSL, including improved range and data rate. ADSL2+ in effect doubles the bandwidth of broadband in addition to doubling the upload data stream. The 6000 Series is future proofed further by supporting theoretical download speeds of 50 Mbps.   The 6000 Series comes with 4 Ethernet ports as standard with the option of 1, 2 or 6 serial ports depending on your compatibility requirements.   For customers who require an additional wired backup network, the 6000 is also available with an optional PSTN or ISDN modem. The very latest wireless networks are also available as backup with the choice of either an EDGE solution or the ultimate ultrahigh-speed HSDPA network.   The key features of the Sarian Systems DR6410 at a glance:
