Cyberoam CR50iNG UTM Firewall

The Cyberoam CR50iNG is the Next-Generation network security appliance that includes UTM security and features required for future networks. The Cyberoam CR50iNG for SMEs are the &Idquo;fastest UTMs" made for this segment. The best-in-class hardware along with software to match, enables the CR50iNG to offer unmatched throughput speeds, compared to any other UTM appliance in this market segment. Cyberoam CR50iNG Key Features

� Copper GbE Ports 3

i¿1/2 Firewall throughput (UDP) (Mbps) 1,000

� Concurrent sessions 60,000

� Anti-Virus throughput (Mbps) 180

With the Cyberoam NG series, businesses get assured Security, Connectivity and Productivity. The Layer 8 Technology treats User-Identity as the 8th Layer or the HUMAN layer in the protocol stack. It attaches User-Identity to security, which adds speed to an organisation's security by offering instant visibility into the source of attacks by username rather than only IP address. Cyberoam's Extensible Security Architecture (ESA) supports feature enhancements that can be developed rapidly and deployed with minimum efforts, offering future-ready security to organisations.
