

Rhino Dual FXO Analog Module

Product Name: Rhino Dual FXO Analog Module

Manufacturer: -

Model Number: Dual-FXO

Please note: The Rhino Dual FXO Analog Module has been discontinued. Please see the Sangoma Asterisk Cards for an alternative product.

The Rhino Dual FXO module plugs into the R8FXX and R24FXX base cards and provides a universal telephone line interface that is compatible with 70 country line conditions. It supports two analog POTS incoming lines and is the ideal solution for expanding the number of lines you are using to connect to the PSTN.

This module, as well as all the other Rhino products, is rock solid. Our warranty proves it: we offer the best one on the market, the Rhino 5-year limited warranty. And don't forget that by purchasing this product you are entitled to the only lifetime support on the market. This means that whatever problem you might be experiencing with your Rhino product our technical team is here to help you in no time.

In the rare case of a damaged module, you can replace it with a good one without having to throw away the entire board. This will save you money and valuable time, because the card can continue to host your voice applications on the other modules, temporarily losing just two channels instead of all channels.
