

OpenVox FD140 4 port E1/T1/BRI failover appliance

Product Name: OpenVox FD140 4 port E1/T1/BRI failover appliance

Manufacturer: OpenVox

Model Number: FD140

OpenVox FD140 4 port E1/T1/BRI failover appliance

The OpenVox FD140 4 port E1/T1/BRI failover appliance is a 4-port E1/T1/BRI interface failover appliance. It can better protect the unpredictable problems happen to the Asterisk PBX. It will provide an effective way to backup the Asterisk PBX when undesirable changes are detected (often when Asterisk fails or power-off of the system). OpenVox FD140 Features

- ½ Support up to 4 Port Digital T1/E1/PRI/BRI Failover Appliance
- ½ Support multiple FD140 devices in one system
- ½ Support all compatible PRI and BRI interface cards
- ½ Unique highlight：1 USB power supply
- ½ Five Year Warranty

FD140 provides a reliable and flexible solution to Asterisk PBX. FD140 is controlled through an Asterisk loadable module `res_failover.so`. This module keeps sending "running" signal to redundant server when Asterisk is running. Once Asterisk is down or system power is cut off, the module will not be able to send out the "running" signal to FD140 and thus FD140 will automatically switch to the redundant server.

OpenVox FD140 4 port E1/T1/BRI failover appliance - Technical Specifications

Features

- ½ 4 E1 / T1 / BRI ports
- ½ Easy installation; use USB to connect computer or server
