ïزئ Web Application Firewall / Web Filtering / QoS / Bandwidth Management

Cyberoam NG series of Unified Threat Management appliances are the Next-Generation network security appliances that include UTM security features along with performance required for future networks. The NG series for SMEs are the "fastest UTMs" made for this segment, offering unmatched throughput speeds compared to any other UTM appliance in this market. The FleXi Ports (XP) available in CR200iNG-XP UTM appliances offer flexible network connectivity with I/O slot that allows additional Copper/Fiber 1G/10G ports on the same security appliance. To SMEs who want to shift to Fiber 1GbE/10GbE connectivity, FleXi Ports give freedom from forced purchase of higher-end security appliances to get desired I/O interfaces. FleXi Ports consolidate the number of devices in a network, offering benefits of power efficiency, reduced network complexity and reduced OPEX.

With Cyberoam NG series, businesses get assured Security, Connectivity and Productivity. The Layer 8 Technology treats User-Identity as the 8th Layer or the HUMAN layer in the protocol stack. It attaches UserIdentity to security, which adds speed to an organization's security by offering instant visibility into the source of attacks by username rather than only IP address.
