

## Snom A170 Wireless DECT Headset

Product Name: Snom A170 Wireless DECT Headset

Manufacturer: Snom

Model Number: A170

### Snom A170 Wireless DECT Headset

The Snom A170 is a wireless headset accessory for Snom phones that offers not only the highest quality, but also maximum mobility. This light and functional headset has a broadband loudspeaker and a microphone that features passive noise cancelling, designed to filter out annoying background noise. With three different ways of wearing the headset comfort is guaranteed – either directly on the ear or by using the head or neckband provided. Whatever your preference, the Snom A170 can be easily adapted to meet your individual needs.

**Snom A170 Key Features**

- Superior wideband sound
- Passive noise cancelling microphone
- Three wearing options
- Optimised DECT technology
- Long range
- Dual device connectivity (Snom phone and PC)

With the A170, mobility is paramount. For this reason, the headset is not connected to your telephone via bluetooth but by using its base unit's DECT technology, which is considerably stronger. With a range of up to 25 metres, you'll not have to worry about moving too far away from the telephone ever again.

To stop you missing that all important call while you're on the move, the Snom A170 DECT headset also has integrated EHS functionality. At the touch of a button, you can control the most important functions – such as accepting an incoming call, muting the microphone or increasing / decreasing the volume – directly from the headset

### Snom A170 - Technical Specifications
