CyberData Secure Access Control Keypad (011433)

The CyberData Secure Access Control Keypad (011433) uses the existing VoIP or PoE network infrastructure to securely unlock and lock gates or doors.

PoE-powered and in a secure outdoor-rated case, this VoIP Security Endpoint can store up to 500 access codes. There is a blacklisted code list that when activated, will make a phone call and play a pre-recorded message or can broadcast a multicast message to IP speakers when registered to the VoIP server. Good code and blacklisted code lists can be updated on the web interface or autoprovisioned by a remote server.

CyberData has maintained one of the most comprehensive list of IP PBX servers certified to work with CyberData VoIP Products.
