High Speed 10 Gigabit SFP+ UplinksFour SFP+ ports allows your network to utilise 10Gbps ports to link Switches, Servers and Networked Storage with more bandwidth. This helps you reduce the risk of bottlenecks occurring in your network and easily increase network throughput and meet demanding bandwidth requirements.Manage Centrally or Stand-AloneConfigure and monitor the switch through the VigorACS cloud management platform, DrayTek’s Central Switch Management for Vigor routers, or directly via the devices Web Interface. Saves time and money. Easily provision, monitor and manage remote sites without on-site IT or dedicated staff.Advanced Layer 2+ Routing FeaturesExpand your network with support for Layer 3 features such as Static Routes and VLAN Routing, to connect separate networks through the VigorSwitch. Provides a fast and secure bridge between networks.Great Security FeaturesProtect your network against unauthorised access and network problems with 802.1X port authentication, DHCP Snooping, IP Source Guard and Access Control Lists. Secure & control access to your network.Voice VLAN & Surveillance VLANAutomatically assign VLANs and QoS configuration to devices with matching MAC address OUI upon connection to the switch. Reduces broadcast traffic and allows more control when implementing security policies.Hardware MonitoringMonitor and graph switch temperature and power supply status remotely, with alerts for temperature & power supply issues. Receive email notification alerts for power loss, downtime or configuration changes.ONVIF IP Camera ManagementManage ONVIF capable IP Cameras & NVR through the VigorSwitch. Automatically detect IP Camera topology on the network and view the video feed of connected cameras. Simplify management of connected IP Cameras and receive automated alerts for throughput issues.
